## International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

version 18 (revised October 2018)

## INTRODUCTION

This Equivalent European Union Organic Production & Processing Standard for Third Countries was commissioned by, and compiled for, the Accredited Certification Bodies, Brooklyn Park, MN, USA. It has been adapted from the European Regulations (EC) 834/2007 and the more detailed implementing rules in (EC) 889/2008 to provide a base standard for the Accredited Certification Bodies and their certified organic operators (producers, processors and traders) working outside the European Union.

This standard combines, rationalises and simplifies (EC) 834/2007 and the more detailed implementing rules in (EC) 889/2008 and adapts them for use outside the legal framework of the European Union, thus providing production rules to be used by operators for gaining certification equivalent to that described in (EC) 834/2007.

The two original Regulations include many requirements of the control system relevant to the control bodies and many administrative requirements relevant to government authorities and the European Commission itself. These have been removed (834.22, 834.27, 834.29-42, 889.48-56, 889.64-65, 889.67, 889.71, 889.80-88, 889.90-97) to leave only the requirements that need to be applied by operators. The Accredited Certification Bodies using this standard will be required to demonstrate that they apply equivalent control measures to those required within the EU.

Rules for organic aquaculture animal and seaweed production have been added, as of September 2010. These rules are based on the EU Commission Regulation (EC) No 710/2009 and 834/2007. The standards for aquaculture animal (834.15) and seaweed (834.13) have also been re-inserted to update this document.

The standards for yeast production and wine production have been added, as of November 2012. These rules are based on the EU Commission Regulation (EC) No 1254/2008 and No 203/2012, respectively. The standards for importers (889.34) are excluded as they do not apply in the context of countries outside of the EU.

Where specific clauses of the original Regulations make reference to institutions, services or technical requirements, either not available, not relevant, or inappropriate to countries outside of the EU, an alternative measure is applied which is intended to be equivalent.

As the Standard is developed directly from the language of the two European Regulations, the Standard is mostly compliant with those Regulations. Where previously noted alternative measures are applied, the requirement may be considered equivalent.

The Standard is accompanied by the following Annexes:

ANNEX I Fertilisers, soil conditioners and nutrients referred to in 6.4.4;

ANNEX II Plant protection products referred to in 6.5.1

ANNEX III Minimum surface areas indoors and outdoors and other characteristics of housing in

the different species and types of production referred to in 6.7.12;

ANNEX IV Maximum number of animals per hectare referred to in 6.7.6;

ANNEX V Feed materials referred to in 6.7.20;

ANNEX VI Feed additives and certain substances used as in animal nutrition;

ANNEX VII Products for cleaning and disinfection;

ANNEX VIII Certain products and substances for use in production of processed organic food, including yeast and yeast products food additives and processing aids;

Annex VIIIa Products and substances for use or addition in organic products of the wine sector;

ANNEX IX Definitions, updated with animal aquaculture and seaweed definitions;

ANNEX X Specific Organic Aquaculture production rules;

Compiled for the Accredited Certification Bodies, Brooklyn Park, MN, USA

By James A. Riddle and Joyce E Ford

Organic Independents, LLP

Winona, MN, USA

Ref Ref		EU ref	Compliance/
1	Aim		Equivalence
1			
	This Standard provides the basis for the sustainable	834-Article 1	С
	development of organic production while ensuring the effective		
	functioning of the market, guaranteeing fair competition,		
	ensuring consumer confidence and protecting consumer		
	interests.		
	It establishes common objectives and principles to support the		
	rules set out under this Standard concerning:		
	1. all stages of production, preparation and distribution of		
	organic products and their control; and		
	2. the use of indications referring to organic production in		
_	labelling and advertising.		
2	Scope		
2.1	This Standard shall apply to the following products originating	834-Article 1	E
	from agriculture where such products are placed on the EU		E
	market or are intended to be placed on the EU market:		
	1. live or unprocessed agricultural products;		
	2. processed agricultural products for use as food;		
	3. feed;		
	4. aquaculture animal and seaweed products; and		
	5. vegetative propagating material and seeds for cultivation.		
	The products of hunting and fishing of wild animals shall not be		
	considered as organic production.		
2.2	This Standard shall apply to any operator involved in activities,	834-Article 1	С
	at any stage of production, preparation and distribution, relating		
	to the products set out in paragraph 2.1.		
	However, mass catering operations shall not be subject to this		
	Standard.		
2.3	This Standard shall be applied within the framework of relevant	834-Article 1	
	national or international law concerning such products, such as		Е
	provisions governing the production, preparation, marketing,		
	labelling and control, including legislation on foodstuffs and		
	animal nutrition.		
3	Objectives for organic production		
	The following objectives and principles in paragraphs 3 and 4		
	are not standards in themselves but set the framework for the		
	application of all subsequent requirements and shall be used as		
	points of reference when questions of interpretation arise.	834-Article 3	E
	Organic production shall pursue the following general	854-Article 5	
	objectives:		
	1. establish a sustainable management system for agriculture		
	that:		
	(a) respects nature's systems and cycles and sustains and		
	enhances the health of soil, water, plants and animals and the		
	balance between them;		
	(b) contributes to a high level of biological diversity;		

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref		EU ref	Compliance/ Equivalence
	(c) makes responsible use of energy and the natural resources, such as water, soil, organic matter and air; (d) respects high animal welfare standards and in particular meets animals' species-specific behavioural needs; 2. aim at producing products of high quality; 3. aim at producing a wide variety of foods and other agricultural products that respond to consumers' demand for goods produced by the use of processes that do not harm the environment, human health, plant health or animal health and welfare.		
4	Principles of organic production		
4.1	Overall principles		
	Organic production shall be based on the following principles:  1. the appropriate design and management of biological processes based on ecological systems using natural resources which are internal to the system by methods that:  (a) use living organisms and mechanical production methods; (b) practice land-related crop cultivation and livestock production or practice aquaculture which complies with the principle of sustainable exploitation of fisheries; (c) exclude the use of GMOs and products produced from or by GMOs with the exception of veterinary medicinal products; (d) are based on risk assessment, and the use of precautionary and preventive measures, when appropriate;  2. the restriction of the use of external inputs. Where external inputs are required or the appropriate management practices and methods referred to in paragraph (a) do not exist, these shall be limited to: (a) inputs from organic production; (b) natural or naturally-derived substances; (c) low solubility mineral fertilisers;  3. the strict limitation of the use of chemically synthesised inputs to exceptional cases these being: (a) where the appropriate management practices do not exist; and (b) the external inputs referred to in paragraph (b) are not available on the market; or (c) where the use of external inputs referred to in paragraph (b) contributes to unacceptable environmental impacts;  4. the adaptation, where necessary, and within the framework of this Standard, of the rules of organic production taking account of sanitary status, regional differences in climate and local conditions, stages of development, and specific husbandry practices.	834-Article 4	E
4.2	Specific principles applicable to farming		

Equivalence
E
E

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref		EU ref	Compliance/ Equivalence
	1. the production of organic food from organic agricultural ingredients, except where an ingredient is not available on the market in organic form;  2. the restriction of the use of food additives, of non organic ingredients with mainly technological and sensory functions and of micronutrients and processing aids, so that they are used to a minimum extent and only in case of essential technological need or for particular nutritional purposes;  3. the exclusion of substances and processing methods that might be misleading regarding the true nature of the product;  4. the processing of food with care, preferably with the use of biological, mechanical and physical methods.	834-Article 6	Е
4.4	Specific principles applicable to processing of organic feed		
	In addition to the overall principles set out in paragraph 4.1, the production of processed organic feed shall be based on the following specific principles:  1. the production of organic feed from organic feed materials, except where a feed material is not available on the market in organic form;  2. the restriction of the use of feed additives and processing aids to a minimum extent and only in case of essential technological or zootechnical needs or for particular nutritional purposes;  3. the exclusion of substances and processing methods that might be misleading as to the true nature of the product;  4. the processing of feed with care, preferably with the use of	834-Article 7	Е
	biological, mechanical and physical methods.		
4.5	Specific principles applicable to organic aquaculture animal		
	1. The aquatic growing area for organic seaweed and aquaculture animals is of utmost importance for growing both safe and high quality products with minimal impact on the aquatic environment.  2. An environmental assessment covering best adaptation to the surrounding environment and mitigation of possible negative effects is required as established in sections 11.2 and 11.8.  3. The specific soluble medium of water requires organic and non-organic aquaculture production units to be adequately separated.  4. The cultivation of seaweed can have a beneficial effect in some respects such as nutrient removal and can facilitate polyculture systems. Care needs to be taken not to over-harvest wild seaweed beds to permit their regeneration and to ensure that production does not cause a significant impact on the state of the aquatic environment.  5. Organic aquaculture animal production should ensure that species-specific needs of animals are met. In this regard husbandry practices, management systems and containment	710-Principles (4)-(24)	C

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref		EU ref	Compliance/ Equivalence
	systems should satisfy the welfare needs of the animals.		
	Production systems and stocking densities shall meet		
	requirements in section 11.12, 11.13 and in Annex X.		
	6 The overall principles for organic production shall be based on		
	an appropriate design and management of biological processes		
	and ecological systems using natural resources which are		
	internal to the system by methods that, in particular for		
	aquaculture, comply with the principle of sustainable		
	exploitation of fisheries. The biodiversity of natural aquatic		
	ecosystems has to be maintained in organic aquaculture		
	production. These principles are otherwise based on risk		
	assessment, and the use of precautionary and preventive		
	measures, when appropriate. To this end, it should be clarified		
	that artificial induction of the reproduction of aquaculture		
	animals through hormones and hormones derivatives is		
	incompatible with the concept of organic production and		
	consumer perception of organic aquaculture products and that		
	such substances should therefore not be used in organic		
	aquaculture.		
	7. Feed for aquaculture animals should meet the nutritional		
	needs and is also required to meet the health requirement that		
	feed coming from a species is not fed to the same species.		
	8. The raw materials for feeding organic carnivorous fish and		
	crustaceans should be from either organic sources or be derived		
	from sustainable exploitation of fisheries.		
	9. For the purpose of organic aquaculture animal and seaweed		
	production, the use of certain non-organic feed materials, feed		
	additives and processing aids is allowed under well-defined		
	conditions only if they have been authorised for use in organic		
	production and listed in Annex V and Annex VI;		
	10. The cultivation of filter feeding bivalve molluscs can have a		
	beneficial effect on coastal water quality via the removal of		
	nutrients and their use can also facilitate polyculture systems.		
	Specific rules for molluscs are outlined in section 11.20.		
	11. Animal health management should be primarily based on		
	the prevention of disease.		
	12. Certain substances for cleaning, antifouling treatment, and		
	disinfection of production equipment and facilities should be		
	allowed only if they have been authorised for use in organic		
	production under Annex VII, section 2. In the presence of live		
	animals the use of disinfection substances requires particular		
	care and measures to ensure that the application is not harmful.		
	14. Precaution should be taken during the handling and		
	transport of live fish so as to meet their physiological needs.		
	15. The conversion to the organic production method requires		
	the adaptation of all means to the organic method for a given		
	period. Depending on the previous production systems, specific		
	conversion periods are established in accordance with section		

Ref		EU ref	Compliance/ Equivalence
	6.2.3 and 6.2.6.		
5	Production Rules		
5.1	Compliance with standards		
	Operators shall comply with the production rules set out in the relevant sections 5-10. In order to demonstrate compliance they are obliged to maintain the relevant records described in section 10.	834-Article 8	Е
5.2	Adherence to the control system		
	1. Any operator who produces, prepares, stores, or exports from a third country organic products or who places such products on the market shall, prior to placing on the market of any products as organic or in conversion to organic:  (a) submit her/his undertaking to a recognised control body.  2. Where an operator contracts out any of the activities to a third party, that operator shall nonetheless be subject to the requirements referred to in point (a), and the subcontracted activities shall be subject to the control system.	834-Article 28	Е
	3. Where an operator runs several crop production units in the same area the units producing non-organic crops, together with storage premises for farm input products shall also be subject to the general and the specific requirements in paragraphs 5.3,5.4, 5.9.2, 10.2 and the control measures defined in Title IV, Chapter 1 of Regulation (EC) 889/2008	889-Article 73	Е
	4. Where an operator manages several livestock production units, the units which produce non-organic livestock or livestock products shall also be subject to these Standards and the control system.	889-Article 79	CE
	5. When an operator manages several aquaculture animal production units, the units which produce non-organic aquaculture animals shall also be subject to these Standards and the control system.	889-Article 79d	CE
5.3	Minimum control requirements		
	1. When the control arrangements are first implemented, the operator shall draw up and subsequently maintain:  (a) a full description of the unit and/or premises and/or activity;  (b) all the practical measures to be taken at the level of the unit and/or premises and/or activity to ensure compliance with the organic production rules;  (c) the precautionary measures to be taken in order to reduce the risk of contamination by unauthorised products or substances and the cleaning measures to be taken in storage places and throughout the operator's production chain.  (d) the specific characteristics of the production method used, where the operator intends to request documentary evidence.	889-Article 63	Е
	Where appropriate, the description and measures provided for		

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref		EU ref	Compliance/ Equivalence
	in the first subparagraph may be part of a quality system as set		
	up by the operator.		
	2. The description and the measures referred to in paragraph 1		
	shall be contained in a declaration, signed by the responsible		
	operator. In addition, this declaration shall include an		
	undertaking by the operator:		
	(a) to perform the operations in accordance with the organic		
	production rules;		
	(b) to accept, in the event of infringement or irregularities, the		
	enforcement of the measures of the organic production rules;		
	(c) to undertake to inform in writing the buyers of the product in		
	order to ensure that the indications referring to the organic		
	production method are removed from this production.		
	The operator shall countersign the control body's inspection		
	report that identifies possible deficiencies and non-compliances		
	with these Standards and take the necessary corrective		
	measures.		
	(d) to accept, in cases where the operator and/or the		
	subcontractors of that operator are checked by different control		
	authorities or control bodies in accordance with this Standard or		
	other system equivalent or compliant to Regulation (EC)		
	834/2007 and Regulation (EC) 889/2008, the exchange of		
	information between those authorities or bodies.		
	(e) to accept, in cases where the operator and/or the		
	subcontractors of that operator change their control authority or		
	control body, the transmission of their control files to the		
	subsequent control authority or control body.		
	(f) to accept, in cases where the operator withdraws from the		
	control system, to inform without delay the relevant competent		
	authority and control authority or control body.		
	(g) to accept, in cases where the operator withdraws from the		
	control system, that the control file is kept for a period of at least		
	five years.		
	(h) to accept to inform the relevant control authority or		
	authorities or control body or bodies without delay of any		
	irregularity or infringement affecting the organic status of their	889-Article 67	
	product or organic products received from other operators or		
	subcontractors.		С
	3. With regard to access to facilities the operator shall:		
	a) give the control authority or control body, for control		
	purposes, access to all parts of the unit and all		
	premises, as well as to the accounts and relevant supporting		
	documents;		
	b) provide the control authority or control body with any		
	information reasonably necessary for the purposes		
	of the control;		
	c) submit, when requested by the control authority or control		

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref		EU ref	Compliance/ Equivalence
	body, the results of its own quality assurance programmes. In addition to the requirements set out in paragraph 1, importers and first consignees shall submit the information on imported consignments.		•
5.4	Specific control requirements for plants and plant products from farm production or collection-control arrangements		
	1. The full description of the unit referred to in 5.3.1.a shall:  (a) be drawn up even where the operator limits his activity to the collection of wild plants;  (b) indicate the storage and production premises and land parcels and/or collection areas and, where applicable, premises where certain processing and/or packaging operations take place;  (c) specify the date of the last application on the parcels and/or collection areas concerned of products, the use of which is not compatible with the organic production rules.  2. In case of collection of wild plants, the practical measures referred to in 5.3.1.b shall include any guarantees given by third parties which the operator can provide to ensure that those areas have not, for a period of at least three years before the collection, received treatment with products other than those authorised for use in organic production listed in Annexes I and II.	889-Article 70	E
	3. Each year, before the date indicated by the control authority or control body, the operator shall notify the control authority or control body of its schedule of production of crop products, giving a breakdown by parcel.	889 Article 71	C
5.5	Control arrangements for seaweed		
	When the control system applying specifically to seaweed is first implemented, the full description of the site referred to in 5.3.1.a shall include:  1. a full description of the installations on land and at sea;  2. the environmental assessment as outlined in 11.2.3 where applicable;  3. the sustainable management plan as outlined in 11.2.4 where applicable;  4. for wild seaweed a full description and a map of shore and sea collection areas and land areas where post collection activities take place shall be drawn up.	889-Article 73a	C
5.6	Control arrangements for livestock and livestock products		
	1. When the control system applying specifically to livestock production is first implemented, the full description of the unit referred to in 5.3.1.a shall include:  (a) a full description of the livestock buildings, pasturage, open air areas, etc., and, where applicable, the premises for the storage, packaging and processing of livestock, livestock products, raw materials and inputs;	889-Article 74	C C

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref		EU ref	Compliance/ Equivalence
	(b) a full description of the installations for the storage of		Equivalence
	livestock manure.		
	2. The practical measures referred to in 5.3.1.b shall include:		
	(a) a plan for spreading manure agreed with the control body or		
	authority, together with a full description of the areas given over to crop production;		
	(b) where appropriate, as regards the spreading of manure, the		
	written arrangements with other holdings as referred to in		
	6.4.4.3 complying with the provisions of the organic production		
	rules;		
	a management plan for the organic-production livestock unit.		
5.7	Control arrangements for aquaculture animal production		
	When the control system applying specifically to aquaculture	889-Article	С
	animal production is first implemented, the full description of	79a	
	the unit referred to in 5.3.1.a shall include:	774	
	1. a full description of the installations on land and at sea;		
	2. the environmental assessment as outlined in 11.2.3 where		
	applicable;		
	3. the sustainable management plan as outlined in 11.2.4 where		
	applicable.		
	4. in the case of molluscs a summary of the special chapter of the		
	sustainable management plan as required by cultivation rules in		
E O	11.20.4(2)	889Article 79c	C
5.8	For bivalve mollusc production, inspection visits shall take place before and during maximum biomass production.	007ATHCIE 7 9C	С
5.9	Prohibition on the use of GMOs		
	1. Genetically modified organisms (GMOs), and products	834-Article 9	
	produced from or by GMOs shall not be used as food, feed,		С
	processing aids, plant protection products, fertilisers, soil		
	conditioners, seeds, vegetative propagating material, micro-		
	organisms, and animals in organic production.		
	2. For the purpose of the prohibition referred to in paragraph		
	5.9.1, with regard to products not being food or feed, or		
	products produced by GMOs, operators using such non-organic		
	products purchased from third parties shall require the vendor	889-Article 69	
	to confirm that the products supplied have not been produced		
	from or by GMOs.		
5.10	Prohibition on the use of ionising radiation		
	The use of ionising radiation for the treatment of organic food or		
	feed, or of raw materials used in organic food or feed is prohibited.	834-Article 10	С
6	Farm Production		

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref		EU ref	Compliance/ Equivalence
6.1	General farm production rules		
	1. The entire agricultural holding shall be managed in compliance with the requirements applicable to organic production.  2. A holding may be split up into clearly separated units or aquaculture production sites which are not all managed under organic production. As regards animals, different species shall be involved. As regards aquaculture the same species may be involved, provided that there is adequate separation between the production sites. As regards plants, different varieties that can be easily differentiated shall be involved.  3. Where not all units of a holding are used for organic production, the operator shall keep the land, animals, and products used for, or produced by, the organic units separate from those used for, or produced by, the non-organic units and keep adequate records to show the separation.	834-Article 11	С
6.2	Conversion		
6.2.1	General requirements		
6.2.2	1. The following rules shall apply to a farm on which organic production is started:  (a) the conversion period shall start at the earliest when the operator has notified his/her activity to the control body;  (b) during the conversion period all rules established by this Standard shall apply;  (c) conversion periods specific to the type of crop or animal production shall be defined (see paragraphs 6.2.2-6.2.6);  (d) on a holding or unit partly under organic production and partly in conversion to organic production, the operator shall keep the organically produced and in-conversion products separate and the animals separate or readily separable and keep adequate records to show the separation;  (e) in order to determine the conversion period referred to above, a period immediately preceding the date of the start of the conversion period may be taken into account, in so far as certain conditions concur;  (f) animals and animal products produced during the conversion period referred to in subparagraph (c) shall not be marketed with the indications referred to in 9.1 used in the labelling and advertising of products.  Conversion - plants and plant products	834-Article 17	C
6.2.2	Conversion - plants and plant products  1. For plants and plant products to be considered organic, the		С
	production rules as referred to in sections 5.9, 5.10, 6.1 and 6.4 of this Standard must have been applied on the parcels during a conversion period of at least two years before sowing, or, in the	889-Article 36	

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref		EU ref	Compliance/ Equivalence
	case of grassland or perennial forage, at least two years before		
	its use as feed from organic farming, or, in the case of perennial		
	crops other than forage, at least three years before the first		
	harvest of organic products.		
	2. The control body may decide to recognise retroactively as		
	being part of the conversion period any previous period in		
	which:		
	(a) the land parcels were registered in an official environmental		
	protection or similar programme, provided that the measures		
	concerned ensure that products not authorised for organic		
	production have not been used on those parcels, or		
	(b) the parcels were natural or agricultural areas which were not		
	treated with products not authorised for organic production.		
	The period referred to in point 6.2.2.2(b) can be taken into		
	consideration retroactively only where satisfactory proof has		
	been furnished to the control body allowing it to satisfy itself		
	that the conditions were met for a period of at least three years.		
	3. The control body may decide, in certain cases, where the land		
	had been contaminated with products not authorised for organic		
	production, to extend the conversion period beyond the period		
	referred to in paragraph 1.		
6.2.3	Conversion - seaweed		
	1. The conversion period for a seaweed harvesting site shall be	889-Article	6
	six months.	36a	С
	2. The conversion period for a seaweed cultivation unit shall be	304	
	the longer of six months or one full production cycle.		
6.2.4	Conversion - land associated with organic livestock		
	production		
	1. The conversion rules referred to in paragraph 6.2.2 of this	889- Article	С
	Standard shall apply to the whole area of the production unit on	37	
	which animal feed is produced.		
	2. Notwithstanding the provisions in paragraph 6.2.4.1, the		
	conversion period may be reduced to one year for pasturages		
	and open air areas used by non-herbivore species. This period		
	may be reduced to six months where the land concerned has not		
	during the last year, received treatments with products not		
<i>.</i>	authorised for organic production.		
6.2.5	Conversion – livestock and livestock products		
	1. Where non-organic livestock has been brought onto a holding		С
	in accordance with paragraph 6.7.2 of this Standard and if	889- Article	
	livestock products are to be sold as organic products, the	38	
	production rules as referred to in this Standard must have been		
	applied for at least:		
	(a) 12 months in the case of equidae and bovines, including		
	bubalus and bison species, for meat production, and in any case		
	at least three quarters of their lifetime; (b) six months in the case of small ruminants and pigs and		

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref		EU ref	Compliance/ Equivalence
	animals for milk production; (c) 10 weeks for poultry for meat production, brought in before they are three days old; (d) six weeks in the case of poultry for egg production.  2. Where non-organic animals exist on a holding at the beginning of the conversion period their products may be deemed organic if there is simultaneous conversion of the complete production unit, including livestock, pasturage and/or any land used for animal feed. The total combined conversion period for both existing animals and their offspring, pasturage and/or any land used for animal feed, may be reduced to 24 months, if the animals are mainly fed with products from the production unit.		
6.2.6	Conversion - aquaculture animal production		
	1. The following conversion periods for aquaculture production units shall apply for the following types of aquaculture facilities including the existing aquaculture animals:  (a) for facilities that cannot be drained, cleaned and disinfected, a conversion period of 24 months;  (b) for facilities that have been drained, or fallowed, a conversion period of 12 months;  (c) for facilities that have been drained, cleaned and disinfected a conversion period of six months;  (d) for open water facilities including those farming bivalve molluscs, a three month conversion period.  2. The control body may decide to recognise retroactively as being part of the conversion period any previously documented period in which the facilities were not treated or exposed to products not authorised for organic production.	889-Article 38a	Е
6.3	Parallel production		
6.3.1	Parallel production - plant production		
	1. Where an operator's holding faces climatic, geographical or structural constraints, a producer may apply to the control body to run organic and non-organic production units in the same area:  (a) in the case of the production of perennial crops, which require a cultivation period of at least three years, where varieties cannot be easily differentiated, provided the following conditions are met:  (i) the production in question forms part of a conversion plan in respect of which the producer gives a firm undertaking and which provides for the beginning of the conversion of the last part of the area concerned to organic production in the shortest possible period which may not in any event exceed a maximum of five years;  (ii) appropriate measures have been taken to ensure the	889-Article 40.	E
	(ii) appropriate measures have been taken to ensure the permanent separation of the products obtained from each unit		

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref		EU ref	Compliance/ Equivalence
	concerned;		
	(iii) the control body is notified of the harvest of each of the		
	products concerned at least 48 hours in advance;		
	(iv) upon completion of the harvest, the producer informs the		
	control body of the exact quantities harvested on the units		
	concerned and of the measures applied to separate the products;		
	(v) the conversion plan has been approved by the control body;		
	this approval shall be confirmed each year after the start of the		
	conversion plan;		
	(b) in the case of areas intended for agricultural research or		
	formal education agreed by the control body and provided the		
	conditions set out in point 6.3.1.1(a)(ii)(iii)(iv) and the relevant		
	part of point (v) are met;		
	(c) in the case of production of seed, vegetative propagating		
	material and transplants and provided the conditions set out in		
	point 6.3.1.1(a)(ii)(iii)(iv) and the relevant part of point (v) are		
	met;		
	(d) in the case of grassland exclusively used for grazing.		
6.3.2	Parallel production – livestock		
	1. Non organic livestock may be present on the holding	889-Article 17	
	provided they are reared on units where the buildings and		С
	parcels are separated clearly from the units producing in		
	accordance with the organic production rules and a different species is involved.		
	2. Non-organic livestock may use organic pasturage for a limited		
	period of time each year, provided that such animals come from		
	a farming system as defined in paragraph 3(b) and that organic		
	animals are not present at the same time on that pasture.		
	3. Organic animals may be grazed on common land, providing		
	that:		
	(a) the land has not been treated with products not authorised		
	for organic production for at least three years;		
	(b) any non-organic animals which use the land concerned are		
	derived from farming systems that target the sustainable use of		
	land (eg. farms in disadvantaged areas, environmental schemes,		
	higher animal welfare)		
	(c) any livestock products from organic animals, whilst using		
	this land, shall not be regarded as being from organic		Е
	production, unless adequate segregation from non-organic		
	animals can be proved.		
	4. During the period of transhumance animals may graze on		
	non-organic land when they are being moved on foot from one		
	grazing area to another. The uptake of non-organic feed, in the		
	form of grass and other vegetation on which the animals graze,		
	during this period shall not exceed 10 % of the total feed ration		С
	per year. This figure shall be calculated as a percentage of the		
	dry matter of feedingstuffs from agricultural origin.		<u> </u>

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref		EU ref	Compliance/ Equivalence
	5. Operators shall keep documentary evidence of the use of provisions referred to in 6.3.2 6. The control body may authorise holdings carrying out agricultural research or formal education to rear organic and non-organic livestock of the same species, where the following conditions are met:  (a) appropriate measures, notified in advance to the control body, have been taken in order to guarantee the permanent separation between livestock, livestock products, manure and feedingstuffs of each of the units; (b) the producer informs the control body in advance of any delivery or selling of the livestock or livestock products; (c) the operator informs the control body of the exact quantities produced in the units together with all characteristics permitting the identification of the products and confirms that the measures taken to separate the products have been applied	889 – Article 40.2	
6.3.3	Parallel production – beekeeping		
	Where an operator holding faces climatic, geographical or structural constraints, and, for the purpose of pollination actions an operator may run organic and non-organic beekeeping units on the same holding, provided that all the requirements of the organic production rules are fulfilled, with the exception of the provisions for the siting of the apiaries. In that case the product cannot be sold as organic.	889-Article 41	С
	The operator shall keep documentary evidence of the use of this		
	provision.		
6.4	Plant production rules		
	In addition to the general farm production rules laid down in paragraph 6.1 , the following rules shall apply to organic plant production:		С
6.4.1	Seeds		
	1. For the production of products other than seed and vegetative propagating material only organically produced seed and propagating material shall be used. To this end, the mother plant in the case of seeds and the parent plant in the case of vegetative propagating material shall have been produced in accordance with the rules laid down in this Standard for at least one generation, or, in the case of perennial crops, two growing seasons;	834-Article 12.1	С
6.4.2	Use of seed or vegetative propagating material not obtained by		
	the organic production method		
	<ol> <li>Where organic seed or vegetative propagating material is not available on the market,</li> <li>(a) seed and vegetative propagating material from a production unit in conversion to organic farming may be used,</li> <li>(b) where point (a) is not applicable, control bodies may authorise the use of non-organic seed or vegetative propagating</li> </ol>	889-Article 45	Е

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref		EU ref	Compliance/ Equivalence
	material if not available from organic production. However, for		
	the use of non-organic seed and seed potatoes the following		
	paragraphs 2 to 9 apply.		
	2. Non-organic seed and seed potatoes may be used, provided		
	that the seed or seed potatoes are not treated with plant		
	protection products, other than those authorised for treatment of		
	seed in accordance with paragraph 6.5.1.1 unless chemical		
	treatment is prescribed in accordance with national		
	requirements for phytosanitary purposes for all varieties of a		
	given species in the area where the seed or seed potatoes are to be used.		
	3. Species for which it is established that organically produced		
	seed or seed potatoes are available in sufficient quantities and		
	for a significant number of varieties may not be subject of		
	authorisations pursuant to paragraph 1(b) above, unless these		
	are justified by one of the purposes referred to in paragraph 5(c)		
	<ul><li>below.</li><li>4. The responsibility for granting the authorisation referred to in</li></ul>		
	paragraph 1(b) may rest with the control body.		
	5. Authorisation to use seed or seed potatoes not obtained by the		
	organic production method may only be granted in the		
	following cases:		
	(a) where no supplier, meaning an operator who markets seed		
	or seed potatoes to other operators, is able to deliver the seed or		
	seed potatoes before sowing or planting in situations where the		
	user has ordered the seed or seed potatoes in reasonable time;		
	(b) where the user is able to demonstrate that the desired variety		
	and none of the registered alternatives of the same species are		
	appropriate and that the authorisation therefore is significant for		
	her/his production;		
	(c) where it is justified for use in research, test in small-scale		
	field trials, or for variety of conservation purposes agreed by the		
	control body.		
	6. The authorisation shall be granted before the sowing of the		
	crop.		
	7. The authorisation shall be granted only to individual users for		
	one season at a time and the control body responsible for the		
	authorisations shall register the quantities of seed or seed		
	potatoes authorised.		
	8. By way of derogation from paragraph 7, the control body may		
	grant to all users a general authorisation:		
	(a) for a given species when and in so far as the condition laid		
	down in paragraph 5(a) is fulfilled;		
	(b) for a given variety when and in so far as the conditions laid		
	down in paragraph 5(b) are fulfilled.		
	The authorisations referred to in the first subparagraph shall be		
	clearly indicated in records maintained by the control body.		
6.4.3	Soil management and amendments		

Ref		EU ref	Compliance/ Equivalence
	1. Organic plant production shall use tillage and cultivation practices that maintain or increase soil organic matter, enhance soil stability and soil biodiversity, and prevent soil compaction and soil erosion;  2. The fertility and biological activity of the soil shall be maintained and increased by multi-annual crop rotation including legumes and other green manure crops, and by the application of livestock manure or organic material, both preferably composted, from organic production;  3. The use of biodynamic preparations is allowed;  4. In addition, fertilisers and soil conditioners may only be used if they have been authorised for use in organic production by certification body	834-Article 12.1	С
6.4.4	5. Mineral nitrogen fertilisers shall not be used.  Resort to fertilisers and soil conditioners		
	1. Where the nutritional needs of plants cannot be met by cultivation practices, crop rotation and the application of organic material (paragraph 6.4.3.1, 6.4.3.2 and 6.4.3.3) only fertilisers and soil conditioners referred to in Annex I of this Standard may be used in organic production and only to the extent necessary. Operators shall keep documentary evidence of the need to use the product.  2. The total amount of livestock manure applied on the holding may not exceed 170 kg of nitrogen per year/hectare of agricultural area used. This limit shall only apply to the use of farmyard manure, cried farmyard manure and dehydrated poultry manure, composted animal excrements, including poultry manure, composted farmyard manure and liquid animal excrements.  3. Organic-production holdings may establish written cooperation agreements exclusively with other holdings and enterprises which comply with the organic production rules, with the intention of spreading surplus manure from organic production. The maximum limit as referred to in paragraph 2, shall be calculated on the basis of all of the organic-production units involved in such cooperation.  4. Appropriate preparations of micro-organisms may be used to improve the overall condition of the soil or the availability of nutrients in the soil or in the crops.  5. For compost activation appropriate plant-based preparations	889-Article 3	C
6.4.5	or preparations of micro-organisms may be used.  Hydroponic production is prohibited.	889-Article 4	С
6.5	Pest prevention and treatment		
	1. The prevention of damage caused by pests, diseases and weeds shall rely primarily on the protection by natural enemies, the choice of species and varieties, crop rotation, cultivation techniques and thermal processes;	834-Article 12.1	Е

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

		EU ref	Compliance/ Equivalence
	2. In the case of an established threat to a crop, plant protection products may only be used if they have been authorised for use in organic production under Annex II.;		
6.5.1	Resort to pest treatments		
	1. Where plants cannot be adequately protected from pests and diseases by the measures mentioned above, only products referred to in Annex II of this Standard may be used in organic production. Operators shall keep documentary evidence of the need to use the product.  2. For products used in traps and dispensers, except pheromone dispensers, the traps and/or dispensers, shall prevent the substances from being released into the environment and prevent contact between the substances and the crops being cultivated. The traps shall be collected after use and disposed of safely.	889-Article 5	С
6.5.2	Cleaning and disinfection		
	Products for cleaning and disinfection in plant production shall be used only if they have been authorised for use in organic production in Annex VII.	834-Article 12.1	Е
6.5.3	Contamination		
	All plant production techniques used shall prevent or minimise any contribution to the contamination of the environment.	834-Article 12.1	С
6.5.4	Storage of input products		
	In case of organic plant, seaweed, livestock and aquaculture animal production units, storage of input products other than those authorised under this Standard is prohibited in the production unit.	889-Article 35	E
6.6.1	animal production units, storage of input products other than those authorised under this Standard is prohibited in the production unit.	889-Article 35	Е
	animal production units, storage of input products other than those authorised under this Standard is prohibited in the production unit.  Mushroom production  For production of mushrooms, substrates may be used, if they are composed only of the following components:  1. farmyard manure and animal excrements:  (a) either from holdings producing according to the organic production method;  (b) or referred to in Annex I, only when the product referred to in point (a) is not available; and when they do not exceed 25 % of the weight of total components of the substrate, excluding the covering material and any added water, before composting;  2. products of agricultural origin, other than those referred to in point (1), from holdings producing according to organic production method;  3. peat not chemically treated;  4. wood, not treated with chemical products after felling;  5. mineral products referred to in Annex I, water and soil.	889-Article 35 889-Article 6	С
6.6.1	animal production units, storage of input products other than those authorised under this Standard is prohibited in the production unit.  Mushroom production  For production of mushrooms, substrates may be used, if they are composed only of the following components:  1. farmyard manure and animal excrements:  (a) either from holdings producing according to the organic production method;  (b) or referred to in Annex I, only when the product referred to in point (a) is not available; and when they do not exceed 25 % of the weight of total components of the substrate, excluding the covering material and any added water, before composting;  2. products of agricultural origin, other than those referred to in point (1), from holdings producing according to organic production method;  3. peat not chemically treated;  4. wood, not treated with chemical products after felling;		

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref		EU ref	Compliance/ Equivalence
	considered an organic production method provided that:  1. those areas have not, for a period of at least three years before the collection, received treatment with products other than those authorised for use in organic production under Annex I;  2. the collection does not affect the stability of the natural habitat or the maintenance of the species in the collection area.	12.2	•
6.7	Livestock production rules		
	1. In addition to the general farm production rules laid down in paragraph 6.1, the following rules shall apply to livestock production:	834-Article 14	
	Identification of livestock  The livestock shall be identified permanently using techniques adapted to each species, individually in the case of large mammals and individually or by batch in the case of poultry and small mammals.	889-Article 75	С
6.7.1	Origin of animals		
	With regard to the origin of the animals organic livestock shall be born and raised on organic holdings.	834-Article 14	С
6.7.2	Use of non-organic animals		
	<ol> <li>For breeding purposes, non-organically raised animals may be brought onto a holding under specific conditions. Such animals and their products may be deemed organic after compliance with the conversion period referred to in 6.2</li> <li>Non-organic animals may be brought onto a holding for breeding purposes, only when organic animals are not available in sufficient number and subject to the conditions provided for in paragraphs 3 to 5.</li> <li>Non-organic young mammals, when a herd or flock is constituted for the first time, shall be reared in accordance with</li> </ol>	834-Article 14 889-Article 9	C C
	the organic production rules immediately after they are weaned. Moreover, the following restrictions shall apply at the date on which the animals enter the herd:  (a) buffalo, calves and foals shall be less than six months old;  (b) lambs and kids shall be less than 60 days old;  (c) piglets shall weigh less than 35 kg.  4. Non-organic adult male and nulliparous female mammals, for the renewal of a herd or flock, shall be reared subsequently in accordance with the organic production rules. Moreover, the number of female mammals is subject to the following restrictions per year:  (a) up to a maximum of 10 % of adult equine or bovine, including bubalus and bison species, livestock and 20 % of the adult porcine, ovine and caprine livestock, as female animals;  (b) for units with less than 10 equine or bovine animals, or with less than five porcine, ovine or caprine animals any renewal as mentioned above shall be limited to a maximum of one animal per year.		

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref		EU ref	Compliance/ Equivalence
	5. The percentages referred to in paragraph 4 may be increased up to 40 %, subject to prior authorisation by the control body, in the following special cases:  (a) when a major extension to the farm is undertaken;  (b) when a breed is changed;  (c) when a new livestock specialisation is initiated;  (d) when breeds are in danger of being lost to farming and in that case, animals of those breeds must not necessarily be nulliparous.		E
	6. Animals existing on the holding at the beginning of the conversion period and their products may be deemed organic after compliance with the conversion period referred to in 6.2.	834-Article 14	С
6.7.3	Use of non-organic animals		
674	Where organic animals are not available, and with prior authorisation of the control body,  1. when a flock is constituted for the first time, renewed or reconstituted and organically reared poultry are not available in sufficient numbers, non-organically reared poultry may be brought into an organic poultry production unit, provided that the pullets for the production of eggs and poultry for meat production are less than three days old;  2. non-organically reared pullets for egg production of not more than 18 weeks may be brought into an organic livestock unit until 31 December 2020, when organically reared pullets are not available and provided that the relevant provisions related to feeding and disease prevention and treatment are complied with.	889-Article 42	Е
6.7.4	Catastrophic circumstances		
	The control body may authorise on a temporary basis:  1. In the case of high mortality of animals caused by health or catastrophic circumstances, the renewal or reconstitution of the herd or flock with non-organic animals, when organically reared animals are not available and provided that respective conversion periods are applied to the non-organic animals;  2. In the case of high mortality of aquaculture animals caused by: natural disasters, adverse climatic events, sudden water quality and quantity changes for which the operator is not responsible, diseases in aquaculture, failure or destruction of production facilities for which the operator is not responsible, the renewal or reconstitution of the aquaculture stock with nonorganic aquaculture animals, when organically reared animals are not available and provided that at least the latter two thirds of the duration of the production cycle are managed under organic management.  Upon approval by the control body, the individual operators shall keep documentary evidence of the use of the above exceptions.	889-Article 47	Е

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref		EU ref	Compliance/ Equivalence
6.7.5	Husbandry practices and housing conditions		•
	With regard to husbandry practices and housing conditions:     (a) personnel keeping animals shall possess the necessary basic knowledge and skills as regards the health and the welfare needs of the animals;	834-Article 14	С
	(b) husbandry practices, including stocking densities, and housing conditions shall ensure that the developmental, physiological and ethological needs of animals are met; (c) the livestock shall have permanent access to open air areas, preferably pasture, whenever weather conditions and the state of the ground allow this unless restrictions and obligations related to the protection of human and animal health are imposed on the basis of relevant national legislation; (d) the number of livestock shall be limited with a view to minimising overgrazing, poaching of soil, erosion, or pollution caused by animals or by the spreading of their manure; (e) organic livestock shall be kept separate from other livestock. However, grazing of common land by organic animals and of		Е
	organic land by non-organic animals is permitted under certain restrictive conditions (see 6.3.2); (f) duration of transport of livestock shall be minimised; (g) Loading and unloading of animals shall be carried out without the use of any type of electrical stimulation to coerce the animals. The use of allopathic tranquillisers, prior to or during transport, is prohibited.		С
6.7.6	Stocking density		
	1. The total stocking density shall be such as not to exceed the limit of 170 kg of nitrogen per year/hectare of agricultural area as referred to under 6.4.4.2.	889-Article 15	С
	2. To determine the appropriate density of livestock referred to above, the control body shall set out the livestock units equivalent to the above limit. The figures laid down in Annex IV may be taken as a guideline.		E
6.7.7	Access to open air areas		
	<ol> <li>Open air areas may be partially covered.</li> <li>Herbivores shall have access to pasturage for grazing whenever conditions allow.</li> <li>In cases where herbivores have access to pasturage during the grazing period and where the winter-housing system gives freedom of movement to the animals, the obligation to provide open air areas during the winter months may be waived.</li> <li>Notwithstanding paragraph 2, bulls over one year old shall have access to pasturage or an open air area.</li> <li>Poultry shall have access to an open air area for at least one third of their life.</li> </ol>	889-Article 14	С
	third of their life.  6. Open air areas for poultry shall be mainly covered with vegetation and be provided with protective facilities and permit		

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref		EU ref	Compliance/ Equivalence
	fowl to have easy access to adequate numbers of drinking and feeding troughs.		•
	7. Where poultry are kept indoors due to restrictions or		
	obligations imposed on the basis of national legislation, they		
	shall permanently have access to sufficient quantities of		E
	roughage and suitable material in order to meet their ethological		
	needs.		
6.7.8	Possible exception: Specific management allowance in organic livestock		
	The final fattening phase of adult bovines for meat production	889-Article 46	· ·
	may take place indoors, provided that the indoors period does	669-ATTICLE 46	С
	not exceed one fifth of the animal's lifetime and in any case for a		
	maximum period of three months.		
6.7.9	Prohibition of landless livestock production		
	Landless livestock production, by which the operator of the	000 A 1 1/	
	livestock does not manage agricultural land and/or has not	889-Article 16	С
	established a written cooperation agreement with another		
	operator as referred to under 6.4.4 is prohibited.		
6.7.10	Possible exception: Tethering of animals		
	1. Tethering or isolation of livestock shall be prohibited, unless for	834-Article 14	
	individual animals for a limited period of time, and in so far as		С
	this is justified for safety, welfare or veterinary reasons;		
	2. Where the operator holding faces climatic, geographical or		
	structural constraints, control bodies may authorise cattle in small	889-Article 39	E
	holdings to be tethered if it is not possible to keep the cattle in		
	groups appropriate to their behaviour requirements, provided	834-Article 14	
	they have access to pastures during the grazing period and at		
	least twice a week access to open air areas when grazing is not	889-Article 18.4	
	possible		
6.7.11	Management of animals		
	Any suffering, including mutilation, shall be kept to a minimum	889-Article 18	E
	during the entire life of the animal, including at the time of		L
	slaughter. iii. 1. Operations such as attaching elastic bands to the tails		
	of sheep, tail-docking, cutting of teeth, trimming of		
	beaks, and dehorning shall not be carried out		
	routinely in organic farming. However, some of these		
	operations may be authorised by the control body for		
	reasons of safety or if they are intended to improve		
	the health, welfare or hygiene of the livestock on a		
	case-by-case basis.		
	Any suffering to the animals shall be reduced to a minimum by		
	applying adequate anaesthesia and/or analgesia and by carrying		
	out the operation only at the most appropriate age by qualified		
	personnel.		
	2. Physical castration is allowed in order to maintain the quality		

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref		EU ref	Compliance/
	the conditions set out in the second subparagraph of 6.7.11.1.		Equivalence
5.7.12	Rules pertaining to housing conditions		
	1. Insulation, heating and ventilation of the building shall ensure that air circulation, dust level, temperature, relative air humidity, and gas concentration are kept within limits which are not harmful to the animals. The building shall permit plentiful natural ventilation and light to enter.  2. Housing for livestock shall not be mandatory in areas with appropriate climatic conditions to enable animals to live outdoors.  3. The stocking density in buildings shall provide for the comfort, the well being and the species-specific needs of the animals which in particular, shall depend on the species, the breed and the age of the animals. It shall also take account of the behavioural needs of the animals, which depend in particular on the size of the group and the animals' sex. The density shall ensure the animals' welfare by providing them with sufficient space to stand naturally, lie down easily, turn round, groom themselves, assume all natural postures and make all natural movements such as stretching and wing flapping.  4. The minimum surface for indoor and outdoor areas and other characteristics of housing for different species and categories of	889-Article 10	C
	animals are laid down in Annex III.		
6.7.13	Specific housing conditions and husbandry practices for		
	mammals  1. Livestock housing shall have smooth, but not slippery floors. At least half of the indoor surface area as specified in Annex III shall be solid, that is, not of slatted or of grid construction.  2. The housing shall be provided with a comfortable, clean and dry laying/rest area of sufficient size, consisting of a solid construction which is not slatted. Ample dry bedding strewn with litter material shall be provided in the rest area. The litter shall comprise straw or other suitable natural material. The litter may be improved and enriched with any mineral product listed in Annex I.  3. The housing of calves in individual boxes shall be forbidden after the age of one week.  4. Sows shall be kept in groups, except in the last stages of pregnancy and during the suckling period.  5. Piglets shall not be kept on flat decks or in piglet cages.  6. Exercise areas shall permit dunging and rooting by porcine animals. For the purposes of rooting, different substrates can be used.	889-Article 11	С
6.7.14	Specific housing conditions and husbandry practices for		
	poultry  1. Poultry shall not be kept in cages.	000 A-E-1 10	
	2. Water fowl shall have access to a stream, pond, lake or a pool	889-Article 12	С

Ref		EU ref	Compliance/ Equivalence
	whenever the weather and hygienic conditions permit in order		
	to respect their species-specific needs and animal welfare		
	requirements.		
	3. Buildings for all poultry shall meet the following conditions:		
	(a) at least one third of the floor area shall be solid, that is, not of		
	slatted or of grid construction, and covered with a litter material		
	such as straw, wood shavings, sand or turf;		
	(b) in poultry houses for laying hens, a sufficiently large part of		
	the floor area available to the hens shall be available for the		
	collection of bird dropping;		
	(c) they shall have perches of a size and number commensurate		
	with the size of the group and of the birds as laid down in		
	Annex III.		
	(d) they shall have exit/entry pop-holes of a size adequate for the		
	birds, and these pop-holes shall have a combined length of at		
	least 4 m per 100 m2 area of the house available to the birds;		
	(e) each poultry house shall not contain more than:		
	(i) 4800 chickens,		
	(ii) 3000 laying hens,		
	(iii) 5200 guinea fowl,		
	(iv) 4000 female Muscovy or Peking ducks or 3200 male		
	Muscovy or Peking ducks or other ducks,		
	(v) 2500 capons, geese or turkeys;		
	(f) the total usable area of poultry houses for meat production on		
	any single unit, shall not exceed 1600 m²;		
	(g) poultry houses shall be constructed in a manner allowing all		
	birds easy access to open air area.		
	4. Natural light may be supplemented by artificial means to		
	provide a maximum of 16 hours light per day with a continuous		
	nocturnal rest period without artificial light of at least eight		
	hours.		
	5. To prevent the use of intensive rearing methods, poultry shall		
	either be reared until they reach a minimum age or else shall		
	come from slow-growing poultry strains. Where slow-growing		
	poultry strains are not used by the operator the following		
	minimum age at slaughter shall be:		
	(a) 81 days for chickens,		
	(b) 150 days for capons,		
	(c) 49 days for Peking ducks,		
	(d) 70 days for female Muscovy ducks,		
	(e) 84 days for male Muscovy ducks,		
	(f) 92 days for Mallard ducks,		
	(g) 94 days for guinea fowl,		
	(h) 140 days for male turkeys and roasting geese, and		
	(i) 100 days for female turkeys.		
	The control body shall define the criteria of slow-growing		
	strains or draw up a list thereof and provide this information to		
	operators.

6.7.15	Livestock breeding		•
	1. Reproduction shall use natural methods. Artificial insemination is however allowed;	834-Article 14	С
	2. Reproduction shall not be induced by treatment with hormones or similar substances, unless as a form of veterinary therapeutic treatment in case of an individual animal; 3. Other forms of artificial reproduction, such as cloning and embryo transfer, shall not be used; 4. Appropriate breeds shall be chosen. The choice of breeds shall also contribute to the prevention of any suffering and to avoiding the need for the mutilation of animals; 5. In the choice of breeds or strains, account shall be taken of the capacity of animals to adapt to local conditions, their vitality and their resistance to disease. In addition, breeds or strains of animals shall be selected to avoid specific diseases or health problems associated with some breeds or strains used in intensive production, such as porcine stress syndrome, PSE Syndrome (pale-soft-exudative), sudden death, spontaneous abortion and difficult births requiring caesarean operations. Preference is to be	889-Article 8	
	given to indigenous breeds and strains		
6.7.16	Feed for livestock		
	<ol> <li>Primarily obtaining feed for livestock from the holding where the animals are kept or from other organic holdings in the same region;</li> <li>Livestock shall be fed with organic feed that meets the animal's nutritional requirements at the various stages of its development. A part of the ration may contain feed from holdings which are in conversion to organic farming;</li> </ol>	834-Article 14	С
	3. With the exception of bees, livestock shall have permanent access to pasture or roughage; 4. Non-organic feed materials from plant origin, feed materials from animal and mineral origin, feed additives, certain products used in animal nutrition, and processing aids shall be used only if they have been authorised for use in organic production under Annexes V or VI; 5. Growth promoters and synthetic amino-acids shall not be used; 6. Suckling mammals shall be fed with natural, preferably maternal, milk.		E C
6.7.17	Feed from own holding or from other organic holdings		
	1. In the case of herbivores, except during the period each year when the animals are under transhumance subject to 6.3.2.4, at least 60 % of the feed shall come from the farm unit itself or in case this is not feasible, be produced in cooperation with other	889-Article 19	С
	organic farms primarily in the same region.  2. In case of pigs and poultry, at least 20 % of the feed shall come from the farm unit itself or in case this is not feasible, be produced in the same region in cooperation with other organic farms or		

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref		EU ref	Compliance/ Equivalence
	feed business operators.		
6.7.18	Feed meeting animals' nutritional requirements		
6.7.18	1. All young mammals hall be fed on maternal milk in preference to natural milk, for a minimum period of three months for bovines including bubalus and bison species and equidae, 45 days for sheep and goats, and 40 days for pigs.  2. Rearing systems for herbivores are to be based on maximum use of grazing pasturage according to the availability of pastures in the different periods of the year. At least 60 % of the dry matter in daily rations of herbivores shall consist of roughage, fresh or dried fodder, or silage. A reduction to 50 % for animals in dairy production for a maximum period of three months in early lactation is allowed.  3. Roughage, fresh or dried fodder, or silage shall be added to the daily ration for pigs and poultry.  4. The keeping of livestock in conditions, or on a diet, which may encourage anaemia, is prohibited.  5. Fattening practices shall be reversible at any stage of the	889-Article 20	С
	rearing process. Force-feeding is forbidden.		
6.7.19	In-conversion feed		
6.7.20	1. Up to 30 % of the feed formula of rations on average may comprise in-conversion feedingstuffs. When the in-conversion feedingstuffs come from a unit of the holding itself, this percentage may be increased to 100%.  2. Up to 20 % of the total average amount of feedingstuffs fed to the livestock may originate from the grazing or harvesting of permanent pastures or perennial forage parcels or protein crops, sown under organic management on lands in their first year of conversion, provided that they are part of the holding itself and have not been part of an organic production unit of that holding in the last five years. When both in-conversion feedingstuffs and feedingstuffs from parcels in their first year of conversion are being used, the total combined percentage of such feedingstuffs shall not exceed the maximum percentages fixed in paragraph 1.  3. The figures in paragraph 1 and 2 shall be calculated annually as a percentage of the dry matter of feedingstuffs of plant origin.  Use of certain products and substances in feed	889-Article 21	Е
0.7.20	For the purpose of 6.7.16 only the following substances may be	889-Article 22	
	sued in the processing of organic feed and feeding organic animals:  1. Non-organic feed materials of plant and animal origin or other feed materials that are listed in section 2 of Annex V may be used subject to the restrictions laid down in 6.7.21 and 6.7.22 below and only if they are produced or prepared without chemical solvents  2. Feed materials of mineral origin may be used in organic production if they are listed in Annex V and the restrictions laid down therein are complied with.	a- g	С

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref		EU ref	Compliance/ Equivalence
	3. Products from sustainable fisheries may be used to feed organic animals provided that they are produced or prepared without chemical solvents, their use is restricted to non herbivores and the		
	use of fish protein hydrolysate is restricted solely to young animals.		
	4. Feed additives listed in Annex VI and the restrictions laid down therein are complied with may be used.		
	5. Non organic spices, herbs and molasses may be used in organic production provided that their organic form is not available, they are produced or prepared without chemical solvents, their use is limited to 1% of the feed ration of a given species, calculated		
	annually as a percentage of the dry matter of feed from agricultural origin.		
	<ul><li>6. Salt as sea salt or coarse rock salt is permitted.</li><li>7. Organic feed materials of animal origin.</li></ul>		
6.7.21	Use of non-organic protein feed of plant and animal origin for		
	livestock	889-Article 43	
	The use of a limited proportion of nonorganic feed of plant and animal origin is allowed for porcine and poultry species where	889-Article 43	С
	farmers are unable to obtain feed exclusively from organic production. The maximum percentage of non-organic feed		
	authorised per period of 12 months for those species shall be 5 %		
	until 31st December 2020 . The figures shall be calculated annually		
	as a percentage of the dry matter of feed from agricultural origin.  The operator shall keep documentary evidence of the need for the		
6.7.22	use of this provision.  Catastrophic circumstances		
0.7.22	The control body may authorise on a temporary basis: the use of	889-Article 47 c	Е
	non-organic feedingstuffs for a limited period and in relation to a specific area by individual operators, when forage production is lost or when restrictions are imposed, in particular as a result of exceptional meteorological conditions, the outbreak of infectious diseases, the contamination with toxic substances, or as a		
	consequence of fires; Upon approval by the control body, the individual operators shall		
	keep documentary evidence of the use of the above exception.  Control bodies shall keep records of the exceptions they have granted under this allowance.		
6.7.23	Disease prevention and veterinary treatment		
	Disease prevention shall be based on breed and strain selection, husbandry management practices, high quality feed and exercise, appropriate stocking density, and adequate and appropriate	834-Article 14	С
	housing maintained in hygienic conditions.		
6.7.24	Disease prevention		
	1. The use of chemically synthesised allopathic veterinary medicinal products or antibiotics for preventive treatment is prohibited, without prejudice to 6.7.25	889-Article 23	С

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref		EU ref	Compliance/ Equivalence
	2. The use of substances to promote growth or production		
	(including antibiotics, coccidiostatics and other artificial aids for		
	growth promotion purposes) and the use of hormones or similar		
	substances to control reproduction or for other purposes (e.g.		
	induction or synchronisation of oestrus), is prohibited.		
	3. Where livestock is obtained from non-organic units, special		
	measures such as screening tests or quarantine periods may		
	apply, depending on local circumstances.		
	4. Housing, pens, equipment and utensils shall be properly		
	cleaned and disinfected to prevent cross-infection and the build-		
	up of disease carrying organisms. Faeces, urine and uneaten or		
	spilt feed shall be removed as often as necessary to minimise		
	smell and to avoid attracting insects or rodents. For the purpose		
	of cleaning and disinfection (see 6.7.27) only products listed in		
	Annex VII may be used for cleaning and disinfection of livestock		
	buildings, installations, and utensils. Rodenticides (to be used		
	only in traps), and the products listed in Annex II, can be used for		
	the elimination of insects and other pests in buildings and other		
	installations where livestock is kept.		
	5. Buildings shall be emptied of livestock between each batch of		
	poultry reared. The buildings and fittings shall be cleaned and		
	disinfected during this time. In addition, when the rearing of each		
	batch of poultry has been completed, runs shall be left empty to		
	allow vegetation to grow back. Control bodies shall establish the		
	period for which runs must be empty. The operator shall keep		
	documentary evidence of the application of this period. These		
	requirements shall not apply where poultry is not reared in		
	batches, is not kept in runs, and is free to roam, throughout the		
	day.		
.7.25			
	1. Disease shall be treated immediately to avoid suffering to the	834-Article 14	С
	animal; chemically synthesised allopathic veterinary medicinal		
	products including antibiotics may be used where necessary and		
	under strict conditions, when the use of phytotherapeutic,		
	homeopathic and other products is inappropriate or ineffective.		
	In particular, restrictions with respect to courses of treatment and		
	withdrawal periods shall be defined;		
	2. The use of immunological veterinary medicines is allowed;		
	3. Treatments related to the protection of human and animal		
	health imposed on the basis of national legislation shall be		
	allowed;		
	4. Where, despite preventive measures to ensure animal health	889-Article 24	Е
	(see 6.7.24), animals become sick or injured they shall be treated		
	immediately, if necessary in isolation and in suitable housing.		
	5. Phytotherapeutic, homeopathic products, trace elements and		С
	products listed in Section1 of Annex V and in Section 1.1 of		
	Annex VI, shall be used in preference to chemically-synthesised		

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref		EU ref	Compliance/ Equivalence
	therapeutic effect is effective for the species of animal, and the condition for which the treatment is intended.  6. If the use of measures referred to in paragraph 4 and 5 is not effective in combating illness or injury, and if treatment is essential to avoid suffering or distress of the animal, chemically synthesised allopathic veterinary medicinal products or antibiotics may be used under the responsibility of a veterinarian.  7. With the exception of vaccinations, treatments for parasites and compulsory eradication schemes where an animal or group of animals receive more than three courses of treatments with chemically-synthesised allopathic veterinary medicinal products or antibiotics within 12 months, or more than one course of treatment if their productive life cycle is less than one year, the livestock concerned, or produce derived from them, may not be sold as organic products, and the livestock shall undergo the conversion periods set out in 6.2.5. Records of documented evidence of the occurrence of such circumstances shall be kept by the operator for review by the control body.  8. The withdrawal period between the last administration of an allopathic veterinary medicinal product to an animal under normal conditions of use, and the production of organically produced foodstuffs from such animals, is to be twice the legal		Equivalence
	withdrawal period or, in a case in which this period is not		
6.7.26	specified, 48 hours.  Storage of allopathic veterinary products		
	The storage of allopathic veterinary medicinal products and antibiotics is permitted on holdings provided that they have been prescribed by a veterinarian in connection with treatment as referred to in 6.7.25.6, that they are stored in a supervised location, and that they are entered in the livestock record as referred to in Section 10 of this Standard, or as appropriate, in the aquaculture production records as referred to in 10.6.	834-Article 35	С
6.7.27	Cleaning and disinfection		
	With regard to cleaning and disinfection, products for cleaning and disinfection in livestock buildings and installations, shall be used only if they have been authorised for use in organic production under Annex VII.	834-Article 14	С
6.8	Beekeeping		
6.8.1	Beekeeping - Ecotypes	000 4 11 1	
	Preference shall be given to the use of local ecotypes.	889-Article 8	Е
6.8.2	1. Beekeeping - Conversion  1. Beekeeping products can be sold with references to the organic production method only when the organic production rules have been complied with for at least one year.  2. The conversion period for apiaries does not apply in the case of application of 6.8.2.1.2 of this Standard.	889- Article 38	С

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref		EU ref	Compliance/ Equivalence
	3. During the conversion period the wax shall be replaced with wax coming from organic beekeeping.		•
6.8.2.1	Non-organic swarms		
	1. Non-organic animals may be brought onto a holding for breeding purposes, only when organic animals are not available	889-Article 9	С
	in sufficient number.  2. For the renovation of apiaries, 10 % per year of the queen bees and swarms may be replaced by non-organic queen bees and swarms in the organic production unit, provided that the queen bees and swarms are placed in hives with combs or comb		
	foundations coming from organic production units.		
6.8.2.2	Use of non-organic beeswax		
	In the case of new installations or during the conversion period, non-organic beeswax may be used only:	889-Article 44	С
	1. where beeswax from organic beekeeping is not available on the market;		
	<ul><li>2. where it is proven free of contamination by substances not authorised for organic production; and</li><li>3. provided that it comes from the cap</li></ul>		
6822	Catastrophic circumstances		
0.0.2.3			
	The control body may authorise on a temporary basis in case of high mortality of bees caused by health or catastrophic circumstances, the reconstitution of the apiaries with non-organic	889-Article 47	Е
	bees, when organic apiaries are not available; Upon approval by the control body, the individual operators shall keep documentary evidence of the use of the above exception.		
6.8.3	Beekeeping - Hive location		
0.0.5	1. Apiaries shall be placed in areas which ensure nectar and pollen	834-Article 14	С
	sources consisting essentially of organically produced crops or, as appropriate, of spontaneous vegetation or non-organically managed forests or crops that are only treated with low		
	environmental impact methods. Apiaries shall be kept at sufficient distance from sources that may lead to the contamination of		
	beekeeping products or to the poor health of the bees;  2. The siting of the apiaries shall be such that, within a radius of 3 km from the apiary site, nectar and pollen sources consist	889-Article 13	
	vegetation and/or crops treated with low environmental impact methods <sup>1</sup> which cannot affect the qualification of beekeeping production as being organic. The above mentioned requirements	607-1 Hucle 10	

\_

 $<sup>^1\,</sup>$  Equivalent to those as described in Article 22 of Council Regulation 1257/1999 (13)

	do not apply where flowering is not taking place, or the hives are		
	dormant.		
	3. The control body may designate regions or areas where		
	beekeeping complying with organic production rules is not		
	practicable.		
6.8.4	Beekeeping - Hive materials		
	1. The hives shall be made basically of natural materials presenting	889-Article 13	
	no risk of contamination to the environment or the apiculture		С
	products.		
6.8.5	Beekeeping - Husbandry		
	1. The destruction of bees in the combs as a method associated	834-Article 14	С
Ì	with the harvesting of beekeeping products is prohibited;		
Ì	2. The bees wax for new foundations shall come from organic		
Ì	production units.		
Ì	3. Without prejudice to 6.8.7, only natural products such as	889-Article 13	
Ì	propolis, wax and plant oils can be used in the hives.		
Ì	4. The use of chemical synthetic repellents is prohibited during		
Ì	honey extractions operations.		
Ì	5. The use of brood combs is prohibited for honey extraction.		
Ì	6. Mutilation such as clipping the wings of queen bees is	889-Article 18.3	
Ì	prohibited.		
6.8.6	Beekeeping - Feeding		
	1. At the end of the production season hives shall be left with	889-Article 19	
Ì	sufficient reserves of honey and pollen to survive the winter.	007-Milicie 17	С
Ì	2. The feeding of bee colonies shall only be permitted where the		
Ì	survival of the hives is endangered due to climatic conditions and		
Ì	only between the last honey harvest and 15 days before the start of		
Ì	the next nectar or honeydew flow period. Feeding shall be with		
Ì	organic honey, organic sugar syrup, or organic sugar.		
6.8.6.1	Catastrophic circumstances		
	The control body may authorise on a temporary basis the feeding	889-Article 47	_
Ì	of bees with organic honey, organic sugar or organic sugar syrup		Е
Ì	in case of long lasting exceptional weather conditions or		
Ì	catastrophic circumstances, which hamper the nectar or		
Ì	honeydew production.		
1	Upon approval by the control body, the individual operators shall	1	
	keep documentary evidence of the use of the above exception.		
6.8.7	Beekeeping – Disease prevention and veterinary treatment		
1	1. For the purpose of cleaning and disinfection of frames, hives	889-Article 25	
i	and combs, sodium hydroxide may be used.	1	С
	For the purposes of protecting frames, hives and combs, in	1	
	particular from pests, only rodenticides (to be used only in traps),	1

	isolate the infestation of Varroa destructor.		•
	4. If, despite all preventive measures, the colonies become sick or		
	infested, they shall be treated immediately and, if necessary, the		Е
	colonies can be placed in isolation apiaries.		
	5. Veterinary medicinal products may be used in organic		
	beekeeping in so far as the corresponding use is authorised under national law.		
	6. Formic acid, lactic acid, acetic acid and oxalic acid as well as		
	menthol, thymol, eucalyptol or camphor may be used in cases of infestation with Varroa destructor.		С
	7. If a treatment is applied with chemically synthesised allopathic		
	products, during such a period, the colonies treated shall be		
	placed in isolation apiaries and all the wax shall be replaced with		
	wax coming from organic beekeeping. Subsequently, the		
	conversion period of one year laid down at 6.8.2 will apply to		
	those colonies.		
	8. The requirements laid down in paragraph 7 shall not apply to		
	products listed in paragraph 6.		
7	Production of Processed Food		
7.1	General rules		
	1. The preparation of processed organic food shall be kept	834-Article 19	
	separate in time or space from non-organic food.	004 Millere 19	С
	2. Substances and techniques that reconstitute properties that are		
	lost in the processing and storage of organic food, that correct the		
	results of negligence in the processing of these products or that		
	otherwise may be misleading as to the true nature of these		
	products shall not be used.		
7.2	Rules for preserving products and the production of processed		
	feed and food		
	iii. 1.Operators preserving products or producing processed	889-Article	C
	feed or food shall establish and update appropriate	26.1,2	
	procedures based on a systematic identification of		
	critical processing steps.		
	The application of these procedures shall guarantee at all times		
	that preserved or processed products comply with the organic		
	production rules.		
	2. Operators shall comply with and implement the procedures		
	referred to in paragraph1. In particular, operators shall:		
	(a) take precautionary measures to avoid the risk of		
	contamination by unauthorised substances or products;		
	(b) implement suitable cleaning measures, monitor their		
	effectiveness and record those measures;		
	(c) guarantee that non-organic products are not placed on the		
	market with an indication referring to the organic production		
	method.  Split operations		
7.3

	<ol> <li>1. Further to the provisions laid down in 7.2, when non-organic products are also prepared or stored in the preparation unit concerned, the operator shall:         <ul> <li>(a) carry out the operations continuously until the complete run has been dealt with, separated by place or time from similar operations performed on non-organic products;</li> <li>(b) store organic products, before and after the operations, separate by place or time from non-organic products;</li> <li>(c) inform the control body or control authority thereof and keep available an updated register of all operations and quantities processed;</li> <li>(d) take the necessary measures to ensure identification of lots and to avoid mixtures or exchanges with non-organic products;</li> <li>(e) carry out operations on organic products only after suitable cleaning of the production equipment.</li> </ul> </li> <li>Additives, processing aids and other substances and</li> </ol>	889-Article 26.3,4	C
	ingredients used for processing feed or food and any processing practice applied, such as smoking, shall respect the principles of good manufacturing practice.		
7.4	Ingredients		
	The following conditions shall apply to the composition of organic processed food with the exception of products of the wine sector for which section 7.4.4 shall apply:  1. the product shall be produced mainly from ingredients of agricultural origin; in order to determine whether a product is produced mainly from ingredients of agricultural origin, added water and cooking salt shall not be taken into account;  2. only additives, processing aids, flavourings, water, salt, preparations of micro-organisms and enzymes, minerals, trace elements, vitamins, as well as amino acids and other micronutrients in foodstuffs for particular nutritional uses may be used, and only in so far as they have been authorised for use in organic production in accordance with Annex VIII;  3. non-organic agricultural ingredients may be used only if they	834-Article 19	C
	have been authorised for use in organic production by the control body. Such authorisation shall only be granted if the ingredient in question is not available as organic and the authorisation shall be reviewed annually (see 7.4.2).  4. an organic ingredient shall not be present together with the		E
7.4.1	same ingredient in non-organic form or an ingredient in conversion;  5. food produced from in-conversion crops shall contain only one crop ingredient of agricultural origin.  Use of certain products and substances in processing of food		С

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

.ef		EU ref	Compliance, Equivalence
	1. Only the following substances can be used in the processing of organic food with the exception of products from the wine sector: (a) substances listed in Annex VIII to this Standard;	889-Articles <sup>5</sup> 27 and 27a	С
	(b) preparations of micro-organisms and enzymes normally used		
	in food processing; however, enzymes to be used as food additives have to be listed in Annex VIII, Section A;		
	(c) substances, and products <sup>2</sup> labelled as natural flavouring		
	substances or natural flavouring preparations;		
	(d) colours for stamping meat and eggshells <sup>3</sup> ;		
	(e) drinking water and salt (with sodium chloride or potassium		
	chloride as basic components) generally used in food processing;		
	(f) minerals (trace elements included), vitamins, amino acids, and		
	micronutrients, provided that:		
	(i) their use in food for normal consumption is "directly legally		
	required", in the meaning of being directly required by provision		
	of EU law or provisions of national law compatible with Union		
	law, with the consequence that the food cannot be placed at all on		
	the market as food for normal consumption if those minerals,		
	vitamins, amino acids or micronutrients are not added; or		
	(ii) as regards food placed on the market as having particular		
	characteristics or effects in relation to health or nutrition or in		
	relation to needs of specific groups of consumers;		
	- in products referred to in points (a) and (b) of Article 1(1) of		
	Regulation (EU) No 609/2013 of the European Parliament and of		
	the Council (*), their use is authorised by that Regulation and acts		
	adopted on the basis of Article 11(1) of that Regulation for the		
	products concerned.		
	- in products regulated by Commission Directive 2006/125/EC (**),		
	their use is authorised by that Directive, or		
	- in products regulated by Commission Directive 2006/141/EC		
	(***), their use is authorised by that Directive.		
	2. For the purpose of the calculation referred to at 9.1.3.(a)(ii),		
	(a) food additives listed in Annex VIII and marked in the column		
	of the additive code number, shall be calculated as ingredients of		
	agricultural origin;		
	(b) preparations and substances referred to in paragraph		
	1.(b),(c),(d),(e), and (f) of this paragraph and substances not		
	marked with an asterisk in the column of the additive code		
	number shall not be calculated as ingredients of agricultural		

 $<sup>^2</sup>$  As defined in Articles 12.2.(b)(i) and 12.2.(c) of Council Directive 88/388/EEC (14) according to Articles 91.(d) and 2.2. of that Directive.

 $<sup>^3</sup>$  In accordance with, respectively, Article 2(8) and Article 2(9) of European Parliament and Council Directive 94/36/EC (15);

	1. Operators shall ensure that organic products are transported to other units, including wholesalers and retailers, only in appropriate packaging, containers or vehicles closed in such a manner that substitution of the content cannot be achieved without manipulation or damage of the seal and provided with a label stating, without prejudice to any other indications required by law:  (a) the name and address of the operator and, where different, of the owner or seller of the product; (b) the name of the product or a description of the compound feedingstuff accompanied by a reference to the organic production method; (c) the name and/or the code number of the control body to which the operator is subject; and (d) where relevant, the lot identification mark according to a marking system either approved at national level or agreed with the control body and which permits to link the lot with the accounts referred to in Section 10.  The information referred to in points (a) to (d) of the first subparagraph may also be presented on an accompanying document, if such a document can be undeniably linked with the packaging, container or vehicular transport of the product. This accompanying document shall include information on the supplier and/or the transporter.  2. The closing of packaging, containers or vehicles shall not be required where: (a) transportation is direct between an operator and another operator who are both subject to the organic control system, and (b) the products are accompanied by a document giving the information required under paragraph 1, and (c) both the expediting and the receiving operators shall keep	889-Article 31	-
	documentary records of such transport operations available for		
7.5.3	the control body of such transport operations.  Reception of products from other units and other operators		
	On receipt of an organic product, the operator shall check the closing of the packaging or container where it is required and the presence of the indications provided to in 7.5.2.1.  The operator shall crosscheck the information on the label referred to in 7.5.2.1 with the information on the accompanying documents. The result of these verifications shall be explicitly mentioned in the documentary accounts referred to in Section 10 of this Standard.	889-Article 33	С
	2. The operator shall verify the documentary evidence of his/her	889-Article 29	
7.5.4	suppliers.  Storage of products		
	1. For the storage of products, areas shall be managed in such a way as to ensure identification of lots and to avoid any mixing	889-Article 35	С

	iii. 1. From July 2010 the EU organic production logo may be		
	used in the labelling, presentation and advertising of	834-Article 25	С
	products which satisfy the requirements set out		
	under this Standard.		
	The EU logo shall not be used in the case of in-conversion		
	products and food as referred to in 9.1.3 (b) and (c).		
	2. National and private logos may be used in the labelling,		
	presentation and advertising of products which satisfy the		
	requirements set out under this Standard.		
9.4	Specific labelling requirements for feed		
9.4.1	Scope, use of trade marks and sales descriptions		
	1. This section shall not apply to pet food and feed for fur	889-Article 59	С
	animals.		
	2. The trade marks and sales descriptions bearing an indication		
	referred to in 9.1 may be used only if all ingredients of plant or		
	animal origin are from the organic production method and at		
	least 95% of the product's dry matter is comprised of such		
	ingredients.		
9.4.2	Indications on processed feed		
	1. Without prejudice to 9.4.3 and 9.5.1.2, the terms referred to in	889-Article 60	Е
	9.1 may be used on processed feed provided that:		
	(a) the processed feed complies all provisions of this Standard		
	and in particular with 6.16.4, and 6.16.5, for livestock, with		
	11.7.1.d and 8.1 for aquaculture animals, and 8.1 for both.		
	(b) the processed feed complies with the provisions of this		
	Standard and in particular with 6.7.20 and 7.2;		
	(c) all ingredients of plant or animal origin contained in the		
	processed feed are from organic production		
	(d) at least 95 % of the product's dry matter is comprised of		
	organic agricultural products.		
	2. Subject to the requirements laid down in points (a) and (b) of		
	paragraph 1, the following statement is permitted in the case of		
	products comprising variable quantities of feed materials from		
	the organic production method and/or feed materials from		
	products in conversion to organic farming and/or non-organic		
	materials: 'may be used in organic production in accordance with		
	, , , , , , , , , , , , , , , , , , , ,		
	Regulations (EC) 834/2007 and (EC) 889/2008'.

9.4.3	Conditions for the use of indications on processed feed		•
	1. The indication provided for at 9.4.2 shall be: (a) separate from the wording describing the product and the manufacturer 15;	889-Article 61	С
	<ul> <li>(b) presented in a colour, format or character font that does not draw more attention to it than to the description or name of the animal feedingstuff referred to in (a) above;</li> <li>(c) accompanied, in the same field of vision, by an indication by weight of dry matter referring:</li> <li>(i) to the percentage of feed material(s) from the organic production method;</li> </ul>		
	(ii) to the percentage of feed material(s) from products in conversion to organic farming; (iii) to the percentage of feed material(s) not covered by points (i) and (ii); (iv) to the total percentage of animal feed of agricultural origin; (d) accompanied by a list of names of feed materials from the organic production method; (e) accompanied by a list of names of feed materials from products in conversion to organic production.  2. The indication provided for in 9.4.2 may be also accompanied by a reference to the requirement to use the feedingstuffs in accordance with the requirements for in-conversion feed (6.7.19) and for the use of certain products and substances in feed (6.7.20).		
9.5	Other specific labelling requirements		
9.5.1	In-conversion products of plant origin		
	In-conversion products of plant origin may bear the indication 'product under conversion to organic farming' provided that:  1. a conversion period of at least 12 months before the harvest has been complied with;  2. the indication shall appear in a colour, size and style of lettering which is not more prominent than the sales description of the product, the entire indication shall have the same size of letters;  3. the product contains only one crop ingredient of agricultural origin;  4. the indication is linked to the code number of the control body referred to at 9.2.	889-Article 62	С
10	Record keeping responsibilities of operators		
10.1	General		
	1. Stock and financial records shall be kept in the unit or premises and shall enable the operator to identify and the control body to	889-Article 66	С

\_

 $<sup>^{15}</sup>$  As referred to in Article 5 of Council Directive 79/373/EEC (19) or in Article 51. of Council Directive 96/25/EC (20);

Ref		EU ref	Compliance/ Equivalence
	verify:		
	(a) the supplier and, where different, the seller, or the exporter of		
	the products;		
	(b) the nature and the quantities of organic products delivered to		
	the unit and, where relevant, of all materials bought and the use		
	of such materials, and, where relevant, the composition of the		
	compound feedingstuffs;		
	(c) the nature and the quantities of organic products held in		
	storage at the premises;		
	(d) the nature, the quantities and the consignees and, where		
	different, the buyers, other than the final consumers, of any		
	products which have left the unit or the first consignee's premises		
	or storage facilities;		
	(e) in case of operators who do not store or physically handle		
	such organic products, the nature and the quantities of organic		
	products bought and sold, and the suppliers, and where different,		
	the sellers or the exporters and the buyers, and where different,		
	the consignees.		
	2. The documentary accounts shall also comprise the results of the		
	verification at reception of organic products and any other		
	information required by the control body for the purpose of		
	proper control. The data in the accounts shall be documented		
	with appropriate justification documents. The accounts shall		
	demonstrate the balance between the input and the output.		
	3. Where an operator runs several production units in the same		
	area, the units for non-organic products, together with storage premises for input products must also be subject to the minimum		
	control requirements.		
10.2	Plant production records		
	Plant production records shall be compiled in the form of a	000 4 11 70	
	register and kept available to the control bodies at all times at the	889-Article 72	С
	premises of the holding. In addition to 10.1, such records shall		
	provide at least the following information:		
	-		
	11. as regards the use of fertiliser, date of addition, type and		
	1. as regards the use of fertiliser: date of application, type and amount of fertiliser, parcels concerned:

	feed; (e) veterinary treatments giving details of the purpose, date of application, method of application, type of product and withdrawal period; (f) disease prevention measures giving details of fallowing, cleaning and water treatment.		
10.7	Specific record requirements on beekeeping		
	<ol> <li>A map on an appropriate scale listing the location of hives shall be provided to the control body by the beekeeper. Where no areas are identified in accordance with this standard section 11.1, the beekeeper shall provide the control body with appropriate documentation and evidence, including suitable analyses if necessary, that the areas accessible to his colonies meet the conditions required in this standard.</li> <li>The following information shall be entered in the register of the apiary with regard to the use of feeding: type of product, dates, quantities and hives where it is used.</li> <li>Whenever veterinary medicinal products are to be used, the type of product, including the indication of the active pharmacological substance, together with details of the diagnosis, the posology, the method of administration, the duration of the treatment and the legal withdrawal period shall be recorded clearly and declared to the control body before the products are marketed as organically produced.</li> <li>The zone where the apiary is situated shall be registered together with the identification of the hives. The control body shall be informed of the moving of apiaries by a deadline agreed on with the control body.</li> <li>Particular care shall be taken to ensure adequate extraction, processing and storage of beekeeping products. All the measures to comply with this requirement shall be recorded.</li> <li>The removals of the supers and the honey extraction operations</li> </ol>	889-Article 78	C
10.8	shall be entered in the register of the apiary.  Units processing animal feed		
	For the purposes of proper control of the operations, the documentary accounts referred to in 10.1 shall include information on the origin, nature and quantities of feed materials, additives, sales and finished products.	889-Article 89	С
11	Organic seaweed and aquaculture animal production		
11.1	Production rules for seaweed		

Ref		EU ref	Compliance/ Equivalence
	1. The collection of wild seaweeds, naturally growing in the sea, is considered as an organic production method if:	834-Article 13	E
	(a) the growing areas are of high ecological quality, <sup>16</sup> and are not unsuitable from a health point of view.		
	(b) the collection does not affect the long term stability of the natural habitat or the maintenance of the species in the collection		
	area.  2. The farming of seaweeds shall take place in coastal areas with environmental and health characteristics at least equivalent to		
	those outlined in paragraph 1 in order to be considered organic. In addition:		
	(a) sustainable practices shall be used in all stages of production, from collection of juvenile seaweed to harvesting;		
	(b) to ensure that a wide gene-pool is maintained, the collection of juvenile seaweed in the wild should take place on a regular basis		
	to supplement indoor culture stock; (c) fertilisers shall not be used except in indoor facilities and only		
	if they have been authorised for use in organic production for this purpose under Annex I;		
11.2	Suitability of aquatic medium and sustainable management		
	plan		
	1. Operations shall be situated in locations that are not subject to contamination by products or substances not authorised for	889-Article 6b	С
	organic production, or pollutants that would compromise the organic nature of the products		
	2. Organic and non-organic production units shall be separated adequately. Such separation measures shall be based on the		
	natural situation, separate water distribution systems, distances, the tidal flow, the upstream and the downstream location of the		
	organic production unit.  3. An environmental assessment proportionate to the production unit shall be required for all new operations applying for organic		
	production and producing more than 20 tonnes of aquaculture products per year to ascertain the conditions of the production		
	unit and its immediate environment and likely effects of its operation. The operator shall provide the environmental		
	assessment <sup>17</sup> to the control body. If the unit has already been subject to an equivalent assessment, then its use shall be		
	permitted for this purpose.		

As defined by Directive 2000/60/EC of the European Parliament and of the Council of 23 October 2000, establishing a framework for Community action in the field of water policy, and a quality equivalent to designated waters under Directive 2006/113/EC of the European Parliament and of the Council of 12 December 2006 on the quality required of shellfish waters,

 $<sup>^{17}</sup>$  The content of the environmental assessment shall be based on Annex IV to Council Directive 85/337/EEC (\*).

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref		EU ref	Compliance/ Equivalence
	4. The operator shall provide a sustainable management plan		•
	proportionate to the production unit for aquaculture and seaweed		
	harvesting The plan shall be updated annually and shall detail		
	the environmental effects of the operation, the environmental		
	monitoring to be undertaken, and list measures to be taken to		
	minimise negative impacts on the surrounding aquatic and		
	terrestrial environments, including, where applicable, nutrient		
	discharge into the environment per production cycle or per		
	annum. The plan shall record the surveillance and repair of		
	technical equipment.		
	5. Aquaculture and seaweed business operators shall by		
	preference use renewable energy sources and re-cycle materials		
	and shall draw up as part of the sustainable management plan a		
	waste reduction schedule to be put in place at the commencement		
	of operations. Where possible, the use of residual heat shall be		
	limited to energy from renewable sources.		
	6. For seaweed harvesting a once-off biomass estimate shall be		
	undertaken at the outset.		
11.3	Sustainable harvesting of wild seaweed		
	1. Documentary accounts shall be maintained in the unit or	889-Article 6c	
	premises and shall enable the operator to identify and the control	oos mucie oc	E
	authority or control body to verify that the harvesters have		
	supplied only wild seaweed produced in accordance with this		
	organic standard.		С
	2. Harvesting shall be carried out in such a way that the amounts		
	harvested do not cause a significant impact on the state of the		
	aquatic environment. Measures shall be taken to ensure that		
	seaweed can regenerate, such as harvest technique, minimum		
	sizes, ages, reproductive cycles or size of remaining seaweed.		E
	3. If seaweed is harvested from a shared or common harvest area,		
	documentary evidence shall be available that the total harvest		
	complies with this organic standard.		С
	4. With respect to 10.3.1.b and 10.3.1.c, these records must provide		
	evidence of sustainable management and of no long-term impact		
	on the harvesting areas.		
11.4	Seaweed cultivation		
	1. Seaweed culture at sea shall only utilise nutrients naturally	889-Article 6d	
	occurring in the environment, or from organic aquaculture	509-ATTICLE BU	С
	animal production, preferably located nearby as part of a		
	polyculture system.		
	2. In facilities on land where external nutrient sources are used		
	the nutrient levels in the effluent water shall be verifiably the		
	same, or lower, than the inflowing water. Only nutrients of plant		
	or mineral origin and as listed in Annex I may be used.		
	3. Culture density or operational intensity shall be recorded and		
	shall maintain the integrity of the aquatic environment by		
	ensuring that the maximum quantity of seaweed which can be		

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

D.C	T	EII (	C 1: /
Ref		EU ref	Compliance/ Equivalence
	supported without negative effects on the environment is not		
	exceeded.		
	4. Ropes and other equipment used for growing seaweed shall be		
	re-used or recycled where possible.		
11.5	Antifouling measures and cleaning of production equipment		
	and facilities		
	1. Bio-fouling organisms shall be removed only by physical	889-Article 6e	С
	means or by hand and where appropriate returned to the sea at a		C
	distance from the farm.		
	2. Cleaning of equipment and facilities shall be carried out by		
	physical or mechanical measures. Where this is not satisfactory		
	only substances as listed in Annex VII, Section 2 may be used.		
11.6	Seaweed processing		
	1. If the final product is fresh seaweed, flushing of freshly	889-Article 29a	С
	harvested seaweed shall use seawater. If the final product is		
	dehydrated seaweed, potable water may also be used for		
	flushing. Salt may be used for removal of moisture.		
	2. The use of direct flames which come in direct contact with the		
	seaweed shall be prohibited for drying. If ropes or other		
	equipment are used in the drying process they shall be free of		
	anti-fouling treatments and cleaning or disinfection substances		
11.7	except where a product is listed in Annex VII for this use.		
11./	Aquaculture animal production 18		
	1. In addition to the general farm production rules laid down in	834-Article 15	С
	Section 6.1 of this Standard, the following rules shall apply to		
	aquaculture animal production:  (a) with regard to the origin of the aquaculture animals:		
	(i) organic aquaculture shall be based on the rearing of young		
	stock originating from organic broodstock and organic holdings;		
	(ii) when young stock from organic broodstock or holdings are		
	not available, non-organically produced animals may be brought		
	onto a holding under specific conditions;		
	(b) with regard to husbandry practices:		
	(i) personnel keeping animals shall possess the necessary basic		
	knowledge and skills as regards the health and the welfare needs		
	of the animals;		
	(ii) husbandry practices, including feeding, design of		
	installations, stocking densities and water quality shall ensure		
	that the developmental, physiological and behavioural needs of		
	animals are met;		
	(iii) husbandry practices shall minimise negative environmental		
	impact from the holding, including the escape of farmed stock;		
	(iv) organic animals shall be kept separate from other aquaculture		

 $<sup>^{18}</sup>$  This section applies *mutatis mutandis* to zooplankton, micro-crustaceans, rotifers, worms and other aquatic feed animals.

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref		EU ref	Compliance/ Equivalence
	animals;		
	(v) transport shall ensure that the welfare of animals is		
	maintained;		
	(vi) any suffering of the animals including the time of		
	slaughtering shall be kept to a minimum;		
	(c) with regard to breeding:		
	(i) artificial induction of polyploidy, artificial hybridisation,		
	cloning and production of monosex strains, except by hand		
	sorting, shall not be used;		
	(ii) the appropriate strains shall be chosen;		
	(iii) species-specific conditions for broodstock management,		
	breeding and juvenile production shall be established;		
	(d) with regard to feed for fish and crustaceans:		
	(i) animals shall be fed with feed that meets the animal's		
	nutritional requirements at the various stages of its development;		
	(ii) the plant fraction of feed shall originate from organic		
	production and the feed fraction derived from aquatic animals		
	shall originate from sustainable exploitation of fisheries;		
	(iii) in the case of non-organic feed materials from plant origin,		
	feed materials from animal and mineral origin, feed additives,		
	certain products used in animal nutrition and processing aids		
	shall be used only if they have been authorised for use in organic		
	production and listed in Annex V and Annex VI;		
	(iv) growth promoters and synthetic amino-acids shall not be		
	used;		
	(e) with regard to bivalve molluscs and other species which are		
	not fed by man but feed on natural plankton:		
	(i) such filter-feeding animals shall receive all their nutritional		
	requirements from nature except in the case of juveniles reared in		
	hatcheries and nurseries;		
	(ii) they shall be grown in waters which meet the criteria for Class		
	A or Class B areas as defined in Annex II of Regulation (EC) No		
	854/2004 and found Annex II of this regulation.		
	(iii) the growing areas shall be of high ecological quality as		
	defined by Directive 2000/60/EC and Annex V and, pending its		
	implementation of a quality equivalent to designated waters		
	under Directive 2006/113/EC (for shellfish waters only);		
	(f) with regard to disease prevention and veterinary treatment:		
	(i) disease prevention shall be based on keeping the animals in		
	optimal conditions by appropriate siting, optimal design of the		
	holdings, the application of good husbandry and management		
	practices, including regular cleaning and disinfection of premises,		
	high quality feed, appropriate stocking density, and breed and strain selection;		
	(ii) disease shall be treated immediately to avoid suffering to the		
	animal; chemically synthesised allopathic veterinary medicinal		
	products including antibiotics may be used where necessary and		
	under strict conditions, when the use of phytotherapeutic,		

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref	T	EU ref	Compliance/
IXCI			Equivalence
	homeopathic and other products is inappropriate. In particular,		
	restrictions with respect to courses of treatment and withdrawal		
	periods shall be defined;		
	(iii) the use of immunological veterinary medicines is allowed;		
	(iv) treatments related to the protection of human and animal		
	health imposed on the basis of national legislation shall be		
	allowed.		
	(g) With regard to cleaning and disinfection, products for		
	cleaning and disinfection in ponds, cages, buildings and		Е
	installations, shall be used only if they have been authorised for		
	use in organic production under Annex VII.		
11.8	Suitability of aquatic medium and sustainable management		
	plan		
	1. The provisions of 11.2.1 through 11.2.5 apply to aquaculture	889-Article 25b	
	animal production.		С
	2. Defensive and preventive measures taken against predators <sup>19</sup>		
	shall be recorded in the sustainable management plan.		
	3. Verifiable coordination shall take place with the neighbouring		
	operators in drawing up their management plans where		
	applicable.		
	4. For aquaculture animal production in fishponds, tanks or		
	raceways, farms shall be equipped with either natural filter beds,		
	settlement ponds, biological filters or mechanical filters to collect		
	waste nutrients or use seaweeds and/or animals (bivalves and		
	algae) which contribute to improving the quality of the effluent.		
	Effluent monitoring shall be carried out at regular intervals where		
	appropriate.		
11.9	Simultaneous production of organic and non-organic		
	aquaculture animals		
	1. The control body may permit hatcheries and nurseries to rear	889-Article 25c	
	both organic and non-organic juveniles in the same holding		С
	provided there is clear physical separation between the units and		
	a separate water distribution system exists.		
	2. In case of grow-out production, the control body may permit		
	organic and non-organic aquaculture animal production units on		
	the same holding provided 11.2.2 of this Standard is complied		
	with and where different production phases and different		
	handling periods of the aquaculture animals are involved.		
	3. Operators shall keep documentary evidence of the use of		
	provisions referred to in this paragraph.		
11.10	Origin of aquaculture animals		
	1. Locally grown species shall be used and breeding shall aim to	889-Article	
	give strains which are more adapted to farming conditions, good	557 THUCK	С
	health and good utilisation of feed resources. Documentary		

<sup>-</sup>

 $<sup>^{19}\,</sup>$  As per Council Directive 92/43/EEC (\*) and national rules.

Ref		EU ref	Compliance/ Equivalence
	evidence of their origin and treatment shall be provided for the	25d.1	<u> </u>
	control body.		
	2. Species shall be chosen which can be farmed without causing		
	significant damage to wild stocks.		
11.11	Origin and management of non-organic aquaculture animals		
	1. For breeding purposes or for improving genetic stock and	889-Article 25e	
	when organic aquaculture animals are not available, wild caught		С
	or non-organic aquaculture animals may be brought into a		
	holding. Such animals shall be kept under organic management		
	for at least three months before they may be used for breeding.		
	2. When organic aquaculture juvenile animals are not available		
	non-organic aquaculture juveniles may be brought into a holding.		
	At least the latter two thirds of the duration of the production cycle shall be managed under organic management.		
	3. The maximum percentage of non-organic aquaculture juveniles		
	introduced to the farm shall be: 50 % by 31 December 2014 and 0		
	% by 31 December 2016.		
	4. The collection of wild aquaculture juveniles is specifically		
	restricted to the following cases:		
	(a) natural influx of fish or crustacean larvae and juveniles when		
	filling ponds, containment systems and enclosures;		
	(b) European glass eel, provided that an approved eel		
	management plan is in place for the location and artificial		
	reproduction of eel remains unsolved.		
	(c) the collection of wild fry of species other than European eel for		
	on-growing in traditional extensive aquaculture farming inside		
	wetlands, such as brackish water ponds, tidal areas and costal		
	lagoons, closed by levees and banks, provided that:		
	(i) the restocking is in line with management measures		
	approved by the relevant authorities in charge of the		
	management of the fish stocks in question to ensure the sustainable exploitation of the species concerned, and		
	(ii) the fish are fed exclusively with feed naturally available in		
	the environment		
11.12	Aquaculture husbandry rules		
	The husbandry environment of the aquaculture animals shall	889-Article 25f	
	be designed in such a way that, in accordance with their species	507-111 HCIE 201	С
	specific needs, the aquaculture animals shall:		
	(a) have sufficient space for their wellbeing;		
	(b) be kept in water of good quality with sufficient oxygen levels;		
	(c) be kept in temperature and light conditions in accordance with		
	the requirements of the species and having regard to the		
	geographic location;		
	(d) in the case of freshwater fish, the bottom type shall be as close		
	as possible to natural conditions; and		
	(e) in the case of carp, the bottom shall be natural earth.		
	2. Stocking density and husbandry practices are set out in Annex		

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref		EU ref	Compliance/ Equivalence
	X by species or group of species. In considering the effects of		
	stocking density and husbandry practices on the welfare of		
	farmed fish, the condition of the fish (such as fin damage, other		
	injuries, growth rate, behaviour expressed and overall health) and		
	the water quality shall be monitored.		
	3. The design and construction of aquatic containment systems		
	shall provide flow rates and physiochemical parameters that		
	safeguard the animals' health and welfare and provide for their		
	behavioural needs.		
	4. Containment systems shall be designed, located and operated		
	to minimise the risk of escape incidents.		
	5. If fish or crustaceans escape, appropriate action must be taken		
	to reduce the impact on the local ecosystem, including recapture,		
	where appropriate. Documentary evidence shall be maintained.		
11.13	Specific rules for aquatic containment systems		
	1. Closed recirculation aquaculture animal production facilities	889-Article 25g	
	are prohibited, with the exception of hatcheries and nurseries or	889-Article 25g	
	for the production of species used for organic feed organisms.		С
	2. Rearing units on land shall meet the following conditions:		
	(a) for flow-through systems it must be possible to monitor and		
	control the flow rate and water quality of both in-flowing and		
	out-flowing water;		
	(b) at least 5% of the perimeter ("land-water interface") area shall		
	have natural vegetation.		
	3. Containment systems at sea shall:		
	(a) be located where water flow, depth and water-body exchange		
	rates are adequate to minimise the impact on the seabed and the		
	surrounding water body; and		
	(b) have suitable cage design, construction and maintenance with		
	regard to their exposure to the operating environment.		
	4. Artificial heating or cooling of water shall only be permitted in		
	hatcheries and nurseries. Natural borehole water may be used to		
	heat or cool water at all stages of production.		
11.14	Management of aquaculture animals		
	1. Handling of aquaculture animals shall be minimised,	000 A (* 1 251	
	undertaken with the greatest care and proper equipment and	889-Article 25h	С
	protocols used to avoid stress and physical damage associated		
	with handling procedures. Broodstock shall be handled in a		
	manner to minimise physical damage and stress and under		
	anaesthesia where appropriate. Grading operations shall be kept		
	to a minimum and as required to ensure fish welfare.		
	2. The following restrictions shall apply to the use of artificial		
	light:		
	(a) for prolonging natural day-length it shall not exceed a		
	maximum that respects the ethological needs, geographical		
	conditions and general health of farmed animals, this maximum		
	shall not exceed 16 hours per day, except for reproductive		

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref		EU ref	Compliance/ Equivalence
	purposes;		
	(b) Abrupt changes in light intensity shall be avoided at the		
	changeover time by the use of dimmable lights or background		
	lighting.		
	3. Aeration is permitted to ensure animal welfare and health,		
	under the condition that mechanical aerators are preferably		
	powered by renewable energy sources. All such use is to be		
	recorded in the aquaculture production record.		
	4. The use of oxygen is only permitted for uses linked to animal		
	health requirements and critical periods of production or		
	transport, in the following cases:		
	(a) exceptional cases of temperature rise or drop in atmospheric		
	pressure or accidental pollution,		
	(b) occasional stock management procedures such as sampling		
	and sorting,		
	(c) in order to assure the survival of the farm stock.		
	Documentary evidence shall be maintained.		
	5. Slaughter techniques shall render fish immediately		
	unconscious and insensible to pain. Differences in harvesting		
	sizes, species, and production sites must be taken into account		
	when considering optimal slaughtering methods.		
11.15	Breeding – prohibition of hormones		
	The use of hormones and hormone derivatives is prohibited.	889-Article 25i	С
11.16	Feed for fish, crustaceans and echinoderms-general		
	Feeding regimes shall be designed with the following priorities:	889-Article 25j	
	1. animal health;	,	С
	2. high product quality, including the nutritional composition		
1			
	which shall ensure high quality of the final edible product;		
	which shall ensure high quality of the final edible product; 3. low environmental impact;

	salmon and trout within the limit of their physiological needs. If		•
	organic sources are not available natural sources of astaxanthin		
	(such as Phaffia yeast) may be used.		
	5. Histidine produced through fermentation may be used in the		
	feed ration for salmonid fish when the feed sources listed in		
	paragraph 1 do not provide a sufficient amount of histidine to		
	meet the dietary needs of the fish and prevent the formation of		
	cataracts.		
11.18	Specific rules on feeds for certain aquaculture animals		
	<ol> <li>In the grow-out stages, aquaculture animals as referred to in Annex X, Section 6, Section 7 and Section 9 shall be fed with feed naturally available in ponds and lakes.</li> <li>Where natural feed resources are not available in sufficient</li> </ol>	889-Article 251	С
	quantities as referred to in paragraph 1, organic feed of plant origin, preferably grown on the farm itself or seaweed may be		
	used. Operators shall keep documentary evidence of the need to use additional feed.  3. Where natural feed is supplemented according to paragraph 2:		
	(a) the feed ration of siamese catfish (Pangasius spp.) as referred to in section 9 of Annex X may comprise a maximum of 10 %		
	fishmeal or fish oil derived from sustainable fisheries.		
	(b) the feed ration of penaeid shrimps and freshwater prawns (Macrobrachium spp.) referred to in Section 7 of Annex X may		
	comprise a maximum of 25% fishmeal and 10% fish oil derived from sustainable fisheries. In order to secure the quantitative		
	dietary needs of those shrimps and prawns, organic cholesterol may be used to supplement their diets. Where organic cholesterol		
	is not available, non-organic cholesterol derived from wool,		
	shellfish or other sources may be used. The option to supplement		
	their diet with cholesterol applies both in the grow-out stage and		
	in earlier life stages in nurseries and hatcheries.		
11.18 a	Specific rules on feeds for organic juveniles		
	In the larval rearing of organic juveniles, conventional	1358-2014-	С
	phytoplankton and zooplankton may be used as feed		
	-	Article 25la	
11.19	Products and substances as referred to in Article 15(1)(d)(iii) of Regulation (EC) No 834/2007		
	1. Feed materials of animal and mineral origin may be used in		
	organic aquaculture, only if listed in Annex V.	889-Article	С
	2. Feed additives, certain products used in animal nutrition and	25m	
	processing aids may be used if listed in Annex VI and the		
	restrictions laid down therein are complied with.		
11.20	Specific rules for molluscs		
	Growing area		
1	·· <del>g ··</del>		

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref		EU ref	Compliance/ Equivalence
	1. Bivalve mollusc farming may be carried out in the same area of water as organic finfish and seaweed farming in a polyculture system to be documented in the sustainable management plan. Bivalve molluscs may also be grown together with gastropod molluscs, such as periwinkles, in polyculture.  2. Organic bivalve mollusc production shall take place within areas delimited by posts, floats or other clear markers and shall, as appropriate, be restrained by net bags, cages or other man made means.  3. Organic shellfish farms shall minimise risks to species of conservation interest. If predator nets are used their design shall not permit diving birds to be harmed	889-Article 25n	С
11.20. 2	Sourcing of seed		
	1. Provided that there is no significant damage to the environment and if permitted by local legislation, wild seed from outside the boundaries of the production unit can be used in the case of bivalve shellfish provided it comes from:  (a) settlement beds which are unlikely to survive winter weather or are surplus to requirements, or  (b) natural settlement of shellfish seed on collectors.  Records shall be kept of how, where and when wild seed was collected to allow traceability back to the collection area.  However, the maximum percentage of seed from non-organic bivalve shellfish hatcheries may be introduced to the organic production units with the following maximum percentages: 50 % by 31 December 2014 and 0 % by 31 December 2016.  2. For the cupped oyster, Crassostrea gigas, preference shall be given to stock which is selectively bred to reduce spawning in the wild.	889-Article 250	С
11.20. 3	Management		
	1. Production shall use a stocking density not in excess of that used for non-organic shellfish in the locality. Sorting, thinning and stocking density adjustments shall be made according to the biomass and to ensure animal welfare and high product quality.  2. Biofouling organisms shall be removed by physical means or by hand and where appropriate returned to the sea away from shellfish farms. Shellfish may be treated once during the production cycle with a lime solution to control competing fouling organisms.	889-Article 25p	С
11.20. 4	Cultivation rules		
	<ol> <li>Cultivation on mussel ropes and other methods listed in Annex X, Section 8 may be eligible for organic production.</li> <li>Bottom cultivation of molluscs is only permitted where no significant environmental impact is caused at the collection and</li> </ol>	889-Article 25q	С

	growing sites. The evidence of minimal environmental impact shall be supported by a survey and report on the exploited area to be provided by the operator to the control body or control authority. The report shall be added as a separate chapter to the sustainable management plan.		
11.20. 5	Specific cultivation rules for oysters		
	Cultivation in bags on trestles is permitted. These or other structures in which the oysters are contained shall be set out, so as to avoid the formation of a total barrier along the shoreline. Stock shall be positioned carefully on the beds in relation to tidal flow to optimise production. Production shall meet the criteria listed in the Annex X, Section 8.	889-Article 25r	С
11.21	Disease prevention and veterinary treatment		
11 <b>.2</b> 1. 1	General rules on disease prevention		
	9 of Directive 2006/88/EC shall detail biosecurity and disease prevention practices including a written agreement for health counselling, proportionate to the production unit, with qualified aquaculture animal health services who shall visit the farm at a frequency of not less than once per year and not less than once every two years in the case of bivalve shellfish.  2. Holding systems, equipment and utensils shall be properly cleaned and disinfected. Only products listed in Annex VII, Sections 2.1 to 2.2 may be used.  3. With regard to fallowing:  (a) The control body shall determine whether fallowing is necessary and the appropriate duration which shall be applied and documented after each production cycle in open water containment systems at sea. Fallowing is also recommended for other production methods using tanks, fishponds, and cages;  (b) it shall not be mandatory for bivalve mollusc cultivation;  (c) during fallowing the cage or other structure used for aquaculture animal production is emptied, disinfected and left empty before being used again.  4. Where appropriate, uneaten fish-feed, faeces and dead animals shall be removed promptly to avoid any risk of significant environmental damage as regards water status quality, minimise disease risks, and to avoid attracting insects or rodents.  5. Ultraviolet light and ozone may be used only in hatcheries and nurseries.  6. For biological control of ectoparasites, preference shall be given to the use of cleaner fish and to the use of freshwater, marine water and sodium chloride solutions.	889-Article 25s	E
11.21. 2	Veterinary treatments		

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Ref		EU ref	Compliance/ Equivalence
	1. When despite preventive measures to ensure animal health, a health problem arises, veterinary treatments may be used in the following order of preference:  (a) substances from plants, animals or minerals in a homoeopathic dilution;  (b) plants and their extracts not having anaesthetic effects, and (c) substances such as: trace elements, metals, natural immunostimulants or authorised probiotics.  2. The use of allopathic treatments is limited to two courses of treatment per year, with the exception of vaccinations and compulsory eradication schemes. However, in the cases of a production cycle of less than a year a limit of one allopathic treatment applies. If the mentioned limits for allopathic treatments are exceeded the concerned aquaculture animals can not be sold as organic products.  3. The use of parasite treatments, not including compulsory control schemes operated by respective national or regional authorities shall be limited to twice per year or once per year where the production cycle is less than 18 months.  4. The withdrawal period for allopathic veterinary treatments and parasite treatments according to paragraph 3 including treatments under compulsory control and eradication schemes shall be twice the legal withdrawal period as referred to in Article 11 of Directive 2001/82/EC (this Article defines that "Unless the medicinal product used indicates a withdrawal period for the species concerned, the specified withdrawal period shall not be less than: 7 days for eggs; 7 days for milk; 28 days for meat from poultry and mammals including fat and offal; 500 degree-days for fish meat") or in a case in which this period in not specified 48 hours.  5. Whenever veterinary medicinal products are used, such use is to be declared to the control body or the control authority before the animals are marketed as organic. Treated stock shall be clearly identifiable.		C
1.22	Transport of live fish		
	1. Live fish shall be transported in suitable tanks with clean water	889-Article 32a.	С
	which meets their physiological needs in terms of temperature and dissolved oxygen.  2. Before transport of organic fish and fish products, tanks shall be thoroughly cleaned, disinfected and rinsed.  3. Precautions shall be taken to reduce stress. During transport, the density shall not reach a level which is detrimental to the species.  4. Documentary evidence shall be maintained for paragraphs 1 to 3.

## Annex II Plant protection products referred to in 6.5.1

All the substances listed in this Annex have to comply at least with the conditions for use as specified in the Annex to Commission Implementing Regulation (EU) No 540/2011 (¹). More restrictive conditions for use for organic production are specified in the second column of each table.

1. Substances of crop or animal origin

Name	Description, compositional requirement, conditions for use
Allium sativum (Garlic extract)	
Azadirachtin extracted from Azadirachta indica (Neem tree)	Insecticide
Basic substances	Only those basic substances within the meaning of Article 23(1) of Regulation (EC) No 1107/2009 of the European Parliament and of the Council (1) that are covered by the definition of "foodstuff" in Article 2 of Regulation (EC) No 178/2002 of the European Parliament and of the Council (2) and have plant or animal origin. Substances not to be used as herbicides, but only for the control of pests and diseases
Beeswax	Pruning agent/wound protectant
COS-OGA	
Hydrolysed proteins excluding gelatine	
Laminarin	Kelp shall be either grown organically in accordance with 11.3 and 11.4
Pheromones	Only in traps and dispensers
Plant oils	All uses authorized, except herbicide
Pyrethrins extracted from Chrysanthemum cinerariaefolium	
Pyrethroids (only deltamethrin or lambdacyhalothrin)	Only in traps with specific attractants; only against Bactrocera oleae and Ceratitis capitata Wied.
Quassia extracted from Quassia amara	Insecticide, repellent
Repellents by smell of animal or plant origin/ sheep fat	Only on non-edible parts of the crop and where crop material is not ingested by sheep or goats.
Salix spp. Cortex (aka willow bark extract)	

2. Micro-organisms or substances produced by micro-organisms

Name	Description, compositional requirement, conditions for use		
Micro-organisms	Not from GMO origin		
Spinosad			

#### 3. Substances other than those mentioned in Sections 1 and 2F

Name	Description, compositional requirement, conditions for use		
Aluminium silicate (Kaolin)			
Calcium hydroxide	When used as fungicide, only in fruit trees, including		

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

	nurseries, to control Nectria galligena.
Carbon dioxide	
Copper compounds in the form of copper hydroxide, copper oxychloride, copper oxide, Bordeaux mixture, and tribasic copper sulphate	Only uses as fungicide up to 6 kg copper per ha per year. For perennial crops, by way of derogation from the first paragraph, the control bodies may allow the 6 kg copper limit to be exceeded in a given year provided that the average quantity actually used over a 5-year period consisting of that year and of the 4 preceding years does not exceed 6 kg.
Ethylene	Only indoor uses as plant growth regulator may be authorised. Authorisations shall be limited to professional users.
Fatty acids	All uses authorised, except herbicide
Ferric phosphate (iron (III) orthophosphate)	Preparations to be surface- spread between cultivated plants
Kieselgur (diatomaceous earth)	
Lime sulphur (calcium polysulphide)	
Paraffin oil	
Potassium and sodium hydrogen carbonate (aka potassium bicarbonate)  Quartz sand	
Sulphur	

Article 23 Approval criteria for basic substances of EC 1107/2009, "(1) Basic substances shall be approved in accordance with paragraphs 2 to 6. By way of derogation from Article 5 (defining that approval of the substance is for 10 years), the approval shall be for an unlimited period. For the purpose of paragraphs 2 to 6, basic substance is an active substance which: a) is not a substance of concern; b) does not have an inherent capacity to cause endocrine disrupting, neurotoxic or immunotoxic effects; and c) is not predominantly used for plant protection purposes but nevertheless is useful in plant protection either directly or in a product consisting of the substance and a simple dilutent; d) is not placed on the market as a plant protection product.

For the purpose of this Regulation an active substance which fulfils the criteria of a foodstuff as defined in Article 2 of Regulation EC 178/2002 shall be considered as a basic substance."

#### Regulation EC 178/2002, Article 2 Definition of food:

For the purposes of this Regulation, 'food' (or 'foodstuff') means any substance or product, whether processed, partially processed or unprocessed, intended to be, or reasonably expected to be ingested by humans.

Food' includes drink, chewing gum and any substance, including water, intentionally incorporated into the food during its manufacture, preparation or treatment. It includes water after the point of compliance as defined in Article 6 of Directive 98/83/EC and without prejudice to the requirements of Directives 80/778/EEC and 98/83/EC. 'Food' shall not include: (a) feed; (b) live animals unless they are prepared for placing on the market for human consumption; (c) plants prior to harvesting; (d) medicinal products within the meaning of Council Directives 65/65/EEC (1) and 92/73/EEC (2); (e) cosmetics within the meaning of Council Directive 76/768/EEC (3); (f) tobacco and tobacco products within the meaning of Council Directive 89/622/EEC (4); (g) narcotic or psychotropic substances within the meaning of the United Nations Single Convention on Narcotic Drugs, 1961, and the United Nations Convention on Psychotropic Substances, 1971; (h) residues and contaminants.

**Annex III** 

# Minimum surface areas indoors and outdoors and other characteristics of housing in the different species and types of production referred to in 6.7.12

1. Bovines, equidae, ovine, caprine and porcine

. bovines, equidae, ovine, cap	Indoors area (net area available to animals)		Outdoors area (exercise area, excluding pasturage)	
Breeding and fattening bovine	Live weight minimum (kg)	M2/head	M2/head	
and equidae	up to 100	1.5	1.1	
	up to 200	2.5	1.9	
	up to 350	4	3	
	over 350	5 with a minimum of 1 m2/100 kg	3,7 with a minimum of 0,75 m2/100 kg	
Dairy cows		6	4.5	
Bulls for breeding		10	30	
Sheep and goats		1.5 sheep/goat	2.5	
		0.35 lamb/kid	0.5	
Farrowing sows with piglets up to 40 days		7.5 sow	2.5	
Fattening pigs	up to 50	0.8	0.6	
	up to 85	1.1	0.8	
	up to 110	1.3	1	
	over 110	1.5	1.2	
Piglets	over 40 days and up to 30 kg	0.6	0.4	
Brood pigs		2,5 female	1.9	
		6 male If pens are used for natural service: 10 m2/boar	8.0	

2. Poultry

j	Indoors area (net area available to animals)			Outdoors area	
	No animals/m2	cm perch/animal	nest	(m2 of area available in rotation/head)	
Laying hens	6	18	7 laying hens per nest or in case of common nest 120 cm2/bird	4, provided that the limit of 170 kg of N/ha/year is not exceeded	
Fattening poultry (in fixed housing)	10 with a maximum of 21 kg liveweight/m2	20 (for guinea fowl only)		4 broilers and guinea fowl 4,5 ducks 10 turkey 15 geese In all the species	

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

		mentioned above the limit of 170 kg of N/ha/year is not exceeded
Fattening poultry in mobile housing	16 (1) in mobile poultry houses with a maximum of 30 kg liveweight/ m2	2.5, provided that the limit of 170 kg of N/ha/year is not exceeded

<sup>(1)</sup> Only in the case of mobile houses not exceeding  $1\overline{50}$  m2 floor space.

Annex IV

Maximum number of animals per hectare referred to in 6.7.6

Class or species	Maximum number of animals per ha equivalent to 170 kg N/ha/year
Equines over six months old	2
Calves for fattening	5
Other bovine animals less than one year old	5
Male bovine animals from one to less than two years old	3.3
Female bovine animals from one to less than two years old	3.3
Male bovine animals two years old or over	2
Breeding heifers	2.5
Heifers for fattening	2.5
Dairy cows	2
Cull dairy cows	2
Other cows	2.5
Female breeding rabbits	100
Ewes	13.3
Goats	13.3
Piglets	74
Breeding sows	6.5
Pigs for fattening	14
Other pigs	14
Table chickens	580
Laying hens	230

### Annex V

# Feed materials referred to in 6.7.20

### 1. FEED MATERIALS OF MINERAL ORIGIN

### 3.1. **Sodium:**

- sodium sulphate
- sodium carbonate
- sodium bicarbonate
- sodium chloride

#### 3.2. Potassium:

potassium chloride

### 3.3. Calcium:

- lithotamnion and maerl
  - Calcareous marine shells
- calcium carbonate
- calcium gluconate

### 3.4. Phosphorus:

- defluorinated dicalcium phosphate
- defluorinated monocalcium phosphate
- monosodium phosphate
  - calcium magnesium phosphate
- calcium-sodium phosphate

# 3.5. Magnesium:

- magnesium oxide (anhydrous magnesia)
- magnesium sulphate
- magnesium chloride
- magnesium carbonate
- magnesium phosphate

### 2 OTHER FEED MATERIALS

Saccharomyces cerevisiae Saccharomyces carlsbergiensis

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

### Annex VI

# Feed additives and certain substances used in animal nutrition referred to in 6.7.20

#### 1. FEED ADDITIVES

Additives listed must have been authorised under Regulation (EC) No 1831/2003 of the European Parliament and of the Council (1) on additives for use in animal nutrition.

### 1.1. Nutritional additives

3a Vitamins and pro vitamins

- Vitamins derived from agricultural products
- Synthetic vitamins identical to vitamins derived from agricultural products may be used for monogastric and aquaculture animals;
- Synthetic vitamins A, D, and E identical to vitamins derived from agricultural products may be used
  for ruminants with prior authorization by the control body based on the assessment of the possibility for organic
  ruminants to obtain the necessary quantities of the said vitamins through their feed rations.

### (b) Trace elements

#### E1 Iron:

- ferrous carbonate
- ferrous sulphate monohydrate and/or heptahydrate
- ferric oxide;

01 004	D	. 1. 1
3b201	Potassium	10d1de

- 3b202 Calcium iodate, anhydrous
- 3b203 Coated granulated calcium iodate anhydrous
- 3b301 Cobalt (II) acetate tetrahydrate
- 3b302 Cobalt (II) carbonate
- 3b303 Cobalt (II) carbonate hydroxide (2:3)monohydrate
- 3b304 Coated granulated cobalt (II) carbonate
- 3b305 Cobalt (II) sulphate heptahydrate

### E4 Copper

- Basic cupric carbonate, monohydrate
- Cupric oxide
- Cupric sulphate pentahydrate

3b409 Dicopper chloride trihydroxide (TBCC)

### E5 Manganese

- Manganous oxide
- Manganous sulfate, monohydrate
- Manganous carbonate

### E6 Zinc

- Zinc oxide
- Zinc sulphate monohydrate
- Zinc sulphate heptahydrate

3b609 Zinc chloride hydroxide monohydrate (TBZC)

### E7 Molybdenum:

-sodium molybdate;

### E8 Selenium:

- sodium selenate
  - sodium selenite

3b8.10, 3b8.11, 3b8.12, 3b813 and 3b817

Selenised yeast inactivated

#### 1.2. Zoo-technical additives

4a, 4b, 4c and 4d

Enzymes and micro-organisms in the category of "Zootechnical additives"

#### 1.3. Technological additives

- (a) Preservatives
- E 200 Sorbic acid
- E 236 Formic acid
- E 237 Sodium formate
- E 260 Acetic acid
- E 270 Lactic acid
- E 280 Propionic acid
- E 330 Citric acid.

### (b) Antioxidant substances

1b 306 (i) — Tocopherol extracts from vegetable oils

1b 306(ii) – Tocopherol-rich extracts from vegetable oils (delta rich)

### c) Emulsifying and stabilising agents, thickeners and gelling agents

E322 – Lecithin if derived from organic raw material. Use restricted to aquaculture animal feed.

### (d) Binders and anti-caking agents

E 535 Sodium ferrocyanide, maximum dose rate of 20mg/kg NaCl calculated as ferrocynide anion

E 551b Colloidal silica

E 551c Kieselgur (diatomaceous earth, purified)

1m 558i Bentonite-montmorillonite

E 559 Kaolinitic clays, free of asbestos

E 560 Natural mixtures of stearites and chlorite

E 561 Vermiculite

E 562 Sepiolite

E566 Natrolite-phonolite

1g568 Clinoptilolite of sedimentary origin

E 599 Perlite

### (e) Silage additives

1k Enzyme and micro-organisms - Use restricted to production of silage when weather conditions do not allow for adequate fermentation

### 1.4 Sensory Additives

2b Flavouring compounds - Only when extracted from agricultural products.

### Annex VII

# Products for cleaning and disinfection

# 1. PRODUCTS FOR CLEANING AND DISINFECTION OF BUILDINGS AND INSTALLATIONS FOR ANIMAL PRODUCTION REFERRED TO IN 6.7.4

Potassium and sodium soap

Water and steam

Milk of lime

Lime

Ouicklime

Sodium hypochlorite (e.g. as liquid bleach)

Caustic soda

Caustic potash

Hydrogen peroxide

Natural essences of plants

Citric, peracetic acid, formic, lactic, oxalic and acetic acid

Alcohol

Nitric acid (dairy equipment)

Phosporic acid (dairy equipment)

Formaldehyde

Cleaning and disinfection products for teats and milking facilities

Sodium carbonate

# 2. PRODUCTS FOR CLEANING AND DISINFECTION FOR AQUACULTURE ANIMALS AND SEAWEED PRODUCTION REFERRED TO IN 7.4.3; 11.5; 11.6; 11.7; 11.21.1

# 2.1 Substances for cleaning and disinfection of equipment and facilities in the absence of aquaculture animals may contain the following active substances:

Ozone

sodium chloride

sodium hypochlorite

calcium hypochlorite

calcium hydroxide

calcium oxide

caustic soda

alcohol

hydrogen peroxide

organic acids (acetic acid, lactic acid, citric acid)

humic acid

peroxyacetic acids

peracetic and peroctanoic acids

iodophores (only in the presence of eggs)

potassium permanganate

tea seed cake made of natural camellia seed (use restricted to shrimp production)

mixtures of potassium peroxomonosulphate and sodium chloride producing hypochlorous acid

# 2.2 Limited list of substances for use in the presence aquaculture animals may contain the following active substances:

limestone (calcium carbonate) for pH control

dolomite for pH correction (use restricted to shrimp production)

# **Annex VIII**

# Certain products and substances for use in production of processed organic food, yeast and yeast products referred to in 7.4.1

# SECTION A — FOOD ADDITIVES, INCLUDING CARRIERS

For the purpose of the calculation referred to in 7.4.1 food additives marked with an asterisk in the column of the code number, shall be calculated as ingredients of agricultural origin.

# Annex VIIIa

# Products and substances permitted for use or addition in organic products of the wine sector referred to in 7.4.4

Note: Type of treatment in accordance with Annex III, point A(2)(b) to Regulation (EC) No 606/2009

Type of treatment	Name of products or substances	Specific conditions or restrictions
Use for aeration or oxygenation	Air Gaseous oxygen	
Centrifuging and filtration	Perlite Cellulose Diatomaceous earth	Use only as an inert filtering agent
Use in order to create an inert atmosphere and to handle the product shielded from the air	Nitrogen Carbon dioxide Argon	
Use	Yeasts <sup>20</sup>	
Use	Di-ammonium phosphate Thiamine hydrochloride	
Use	Inactivated yeast, autolysates of yeast and yeast hulls	
Use	Sulphur dioxide Potassium bisulphite or potassium metabisulphite	(a) The maximum sulphur dioxide content shall not exceed 100 milligrams per litre for red wines and with a residual sugar level lower than 2 grams per litre; (b) The maximum sulphur dioxide content shall not exceed 150 milligrams per litre for white and rose' wines and with a residual sugar level lower than 2 grams per litre; (c) For all other wines, the maximum sulphur dioxide content applied in accordance with Annex I B to Regulation (EC) No 606/2009 shall be reduced by 30 milligrams per litre.
Use	Charcoal for oenological use	
Clarification	Edible gelatine <sup>21</sup> Plant proteins from wheat or peas <sub>21</sub> Isinglass <sup>21</sup> Egg white albumin <sup>21</sup> Tannins <sup>21</sup>	

<sup>&</sup>lt;sup>20</sup> For the individual yeast strains: if available, derived from organic raw material.

<sup>&</sup>lt;sup>21</sup> Derived from organic raw material if available.

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

Type of treatment	Name of products or substances	Specific conditions or restrictions
	Potato protein <sup>21</sup>	
	Yeast protein extracts <sup>21</sup>	
	Casein	
	Chitosan derived from Aspergillus	
	niger	
	Potassium caseinate	
	Silicon dioxide	
	Bentonite	
TT (	Pectolytic enzymes	
Use for acidification purposes	Lactic acid	
II	L(+)Tartaric acid	
Use for deacidification purposes	L(+)Tartaric acid Calcium carbonate	
	Neutral potassium tartrate Potassium bicarbonate	
Addition	Aleppo pine resin	
Use	Lactic bacteria	
Addition	L-Ascorbic acid	
Use for bubbling	Nitrogen	
Addition	Carbon dioxide	
Addition for wine stabilization purposes	Citric acid	
Addition	Tannins <sup>21</sup>	
Addition	Meta-tartaric acid	
Use	Acacia gum <sup>21</sup> (= gum arabic)	
Use	Potassium bitartrate	
Use	Cupric citrate	
Use	Yeast mannoproteins	
Use	Oak chips	
Use	Potassium alginate	
Type of treatment	Calcium sulphate	Only for "vino generoso" or "vino generoso de licor"

### Annex IX

# For the purpose of this standard, the following definitions shall apply

- 1. 'organic production' means the use of the production method compliant with the rules established in this Regulation, at all stages of production, preparation and distribution;
- 2. 'stages of production, preparation and distribution' means any stage from and including the primary production of an organic product up to and including its storage, processing, transport, sale or supply to the final consumer, and where relevant labelling, advertising, import, export and subcontracting activities;
- 3. 'organic' means coming from or related to organic production;
- (4) 'operator' means the natural or legal persons responsible for ensuring that the requirements of this Regulation are met within the organic business under their control;
- (5) 'plant production' means production of agricultural crop products including harvesting of wild plant products for commercial purposes;
- (6) 'production unit" means all assets to be used for a production sector such as production premises, land parcels, pasturages, open air areas, livestock buildings, fish ponds, containment systems for seaweed or aquaculture animals, shore or seabed concessions, the premises for the storage of crops, crop products, seaweed products, animal products, raw materials and any other input relevant for this specific production sector;
- (7) the definition of 'aquaculture' is that given in Council Regulation (EC) No 1198/2006 of 27 July 2006 on the European Fisheries Fund<sup>22</sup>;
- (8) 'conversion' means the transition from non-organic to organic farming within a given period of time, during which the provisions concerning the organic production have been applied;
- (9) 'preparation' means the operations of preserving and/or processing of organic products, including slaughter and cutting for livestock products, and also packaging, labelling and/or alterations made to the labelling concerning the organic production method;
- (10) 'closed recirculation aquaculture facility' means a facility where aquaculture takes place within an enclosed environment on land or on a vessel involving the recirculation of water, and depending on permanent external energy input to stabilise the environment for the aquaculture animals;
- (11) 'energy from renewable sources' means renewable non-fossil energy sources: wind, solar, geothermal, wave, tidal, hydropower, landfill gas, sewage treatment plant gas and biogases;
- (12) 'hatchery' means a place of breeding, hatching and rearing through the early life stages of aquaculture animals, finfish and shellfish in particular;

<sup>22</sup> OJ L 223, 15.8.2006, p. 1.

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

- (13) 'nursery' means a place where an intermediate farming system, between the hatchery and grow-out stages is applied. The nursery stage is completed within the first third of the production cycle with the exception of species undergoing a smoltification process;
- (14) 'pollution' in the framework of aquaculture and seaweed production means the direct or indirect introduction into the aquatic environment of substances or energy as defined in Directive 2008/56/EC of the European Parliament and of the Council<sup>23</sup> and in Directive 2000/60/EC of the European Parliament and of the Council<sup>24</sup>, in the waters where they respectively apply;
- (15) "polyculture" in the framework of aquaculture and seaweed production, means the rearing of two or more species usually from different trophic levels in the same culture unit;
- (16) "production cycle" in the framework of aquaculture and seaweed production, means the lifespan of an aquaculture animal or seaweed from the earliest life stage to harvesting;
- (17) "locally grown species" in the framework of aquaculture and seaweed production, means those which are neither alien nor locally absent species under Council Regulation (EC) No 708/2007<sup>25</sup>. Those species listed in Annex IV of Regulation (EC) No 708/2007 may be considered as locally grown species.
- (18) "stocking density" in the framework of aquaculture, means the live weight of animals per cubic metre of water at any time during the grow-out phase and in the case of flatfish and shrimp the weight per square metre of surface.
- (19) the definitions of 'food', 'feed' and 'placing on the market' are those given in Regulation (EC) No 178/2002 of the European Parliament and of the Council of 28 January 2002 laying down the general principles and requirements of food law, establishing the European Food Safety Authority and laying down procedures in matters of food safety<sup>26</sup>;
- (20) 'labelling' means any terms, words, particulars, trade marks, brand name, pictorial matter or symbol relating to and placed on any packaging, document, notice, label, board, ring or collar accompanying or referring to a product;
- (21) the definition of 'pre-packaged foodstuff' is that given in Article 13.(b) of Directive 2000/13/EC of the European Parliament and of the Council of 20 March 2000 on the approximation of the laws of the Member States relating to the labelling, presentation and advertising of foodstuffs<sup>27</sup>;
- (22) 'advertising' means any representation to the public, by any means other than a label, that is intended or is likely to influence and shape attitude, beliefs and behaviours in order to promote directly or indirectly the sale of organic products;

<sup>&</sup>lt;sup>23</sup> OJ L 164, 25.6.2008, p. 19.

<sup>&</sup>lt;sup>24</sup> OJ L 327, 22.12.2000, p. 1.

<sup>&</sup>lt;sup>25</sup> OJ L 168, 28.6.2007, p. 1.

<sup>&</sup>lt;sup>26</sup> OJ L 31, 1.2.2002, p. 1. Regulation as last amended by Commission Regulation (EC) No 575/2006 (OJ L 100, 8.4.2006, p. 3).

OJ L 109, 6.5.2000, p. 29. Directive as last amended by Commission Directive 2006/142/EC (OJ L 368, 23.12.2006, p. 110).

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

- (23) 'competent authority' means the central authority competent for the organisation of official controls in the field of organic production in accordance with the provisions set out under this Regulation, or any other authority on which that competence has been conferred to; it shall also include, where appropriate, the corresponding authority of a third country;
- (24) 'control authority' means a public administrative organisation to which the competent authority has conferred, in whole or in part, its competence for the inspection and certification in the field of organic production in accordance with the provisions set out under this Regulation; it shall also include, where appropriate, the corresponding authority of a third country or the corresponding authority operating in a third country;
- (25) 'control body' means an independent private third party carrying out inspection and certification in the field of organic production in accordance with the provisions set out under this Regulation; it shall also include, where appropriate, the corresponding body of a third country or the corresponding body operating in a third country;
- (26) 'mark of conformity' means the assertion of conformity to a particular set of standards or other normative documents in the form of a mark;
- (27) the definition of 'ingredients' is that given in Article 6(4) of Directive 2000/13/EC;
- (28) the definition of 'plant protection products' is that given in Council Directive 91/414/EEC of 15 July 1991 concerning the placing of plant protection products on the market<sup>28</sup>;
- (29) the definition of 'Genetically modified organism (GMO)' is that given in Directive 2001/18/EC of the European Parliament and of the Council of 12 March 2001 on the deliberate release into the environment of genetically modified organisms and repealing Council Directive 90/220/EEC<sup>29</sup> and which is not obtained through the techniques of genetic modifications listed in Annex I.B of that Directive;
- (30) 'produced from GMOs' means derived in whole or in part from GMOs but not containing or consisting of GMOs;
- (31) 'produced by GMOs' means derived by using a GMO as the last living organism in the production process, but not containing or consisting of GMOs nor produced from GMOs;
- (32) the definition of 'feed additives' is that given in Regulation (EC) No 1831/2003 of the European Parliament and of the Council of 22 September 2003 on additives for use in animal nutrition<sup>30</sup>;

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

- (33) 'equivalent', in describing different systems or measures, means that they are capable of meeting the same objectives and principles by applying rules which ensure the same level of assurance of conformity;
- (34) 'processing aid' means any substance not consumed as a food ingredient by itself, intentionally used in the processing of raw materials, foods or their ingredients, to fulfil a certain technological purpose during treatment or processing and which may result in the unintentional but technically unavoidable presence of residues of the substance or its derivatives in the final product, provided that these residues do not present any health risk and do not have any technological effect on the finished product;
- (35) the definition of 'ionising radiation' is that given in Council Directive 96/29/Euratom of 13 May 1996 laying down basic safety standards for the protection of the health of workers and the general public against the dangers arising from ionising radiation<sup>31</sup> and as restricted by Article 12. of Directive 1999/2/EC of the European Parliament and of the Council of 22 February 1999 on the approximation of the laws of the Member States concerning foods and food ingredients treated with ionising radiation<sup>32</sup>.
- (36) 'mass catering operations' means the preparation of organic products in restaurants, hospitals, canteens and other similar food business at the point of sale or delivery to the final consumer.

<sup>&</sup>lt;sup>31</sup> OJ L 159, 29.6.1996, p. 1.

<sup>&</sup>lt;sup>32</sup> OJ L 66, 13.3.1999, p. 16. Directive as amended by Regulation (EC) No 1882/2003 (OJ L 284, 31.10.2003, p. 1).

### Annex X

# Specific Organic Aquaculture production rules

(Stocking density for aquaculture animals by species or group of species referred to in 11.12; 11.18; 11.20)

### **SECTION 1**

Organic production of salmonids in fresh water: Brown trout (Salmo trutta)—Rainbow trout (Oncorhynchus mykiss)—American brook trout (Salvelinus fontinalis)—Salmon (Salmo salar)—Charr (Salvelinus alpinus)—Grayling (Thymallus thymallus)—American lake trout (or grey trout) (Salvelinus namaycush)—Huchen (Hucho hucho)

Production system	On growing farm systems must be fed from open systems. The flow rate must ensure a minimum of 60 % oxygen saturation for stock and must ensure their comfort and the elimination of farming effluent.
Maximum stocking density	Salmonid species not listed below 15 kg/m 3
	Salmon 20 kg/m 3
	Brown trout and Rainbow trout 25 kg/m 3
	Arctic charr 25 kg/m 3

### **SECTION 2**

Organic production of salmonids in sea water:

Salmon (Salmo salar), Brown trout (Salmo trutta) — Rainbow trout (Oncorhynchus mykiss)

Maximun	n stocking de	nsity	10 kg/m	3 in net pens	s				

### **SECTION 3**

Organic production of cod (*Gadus morhua*) and other Gadidae, sea bass (*Dicentrarchus labrax*), sea bream (*Sparus aurata*), meagre (*Argyrosomus regius*), turbot (*Psetta maxima* [= *Scopthalmus maximux*]), red porgy (*Pagrus pagrus* [= *Sparus pagrus*]), red drum (*Sciaenops ocellatus*) and other Sparidae, and spinefeet (*Siganus spp.*)

Production system	In open water containment systems (net pens/cages) with minimum sea current speed to provide optimum fish welfare or in open systems on land.						
Maximum stocking density	For fish other than turbot: 15 kg/m³						
	For turbot: 25 kg/m <sup>2</sup>						

### **SECTION 4**

Organic production of sea bass, sea bream, meagre, mullets (*Liza*, *Mugil*) and eel (*Anguilla spp.*) in earth ponds of tidal areas and costal lagoons

Containment system	Traditional salt pans transformed into aquaculture production units and similar earth ponds in tidal areas	
Production system	There shall be adequate renewal of water to ensure the welfare of the species, At least 50 % of the dikes must have plant cover  Wetland based depuration ponds required	
Maximum stocking density	4 kg/m <sup>3</sup>	

<sup>©</sup> International Accredited Certification Bodies Equivalent European Union Organic Production & Processing Standard for Third Countries

### **SECTION 5**

Organic production of Sturgeon in fresh water:

Species concerned: Acipenser family

Production system	Water flow in each rearing unit shall be sufficient to ensure animal welfare Effluent water to be of equivalent quality to incoming water
Maximum stocking density	30 kg/m 3

# **SECTION 6**

Organic production of fish in inland waters:

Species concerned: Carp family (Cyprinidae) and other associated species in the context of polyculture, including

perch, pike, catfish, coregonids, sturgeon.

Production system	In fishponds which shall periodically be fully drained and in lakes. Lakes must be devoted exclusively to organic production, including the growing of crops on dry areas.
	The fishery capture area must be equipped with a clean water inlet and of a size to provide optimal comfort for the fish. The fish must be stored in clean water after harvest.
	Organic and mineral fertilisation of the ponds and lakes shall be carried out in compliance with Annex I with a maximum application of 20 kg Nitrogen/ha.
	Treatments involving synthetic chemicals for the control of hydrophytes and plant coverage present in production waters are prohibited.
	Areas of natural vegetation shall be maintained around inland water units as a buffer zone for external land areas not involved in the farming operation in accordance with the rules of organic aquaculture.
	For grow-out "polyculture" shall be used on condition that the criteria laid down in the present specifications for the other species of lakes fish are duly adhered to.
Farming yield	The total production of species is limited to 1 500 kg of fish per hectare per year.

### **SECTION 7**

Organic production of penaeid shrimps and freshwater prawns (Macrobrachium spp.):

Establishment of production unit/s	Location to be in sterile clay areas to minimise environmental impact of pond construction. Ponds to be built with the natural pre-existing clay. Mangrove destruction is not permitted.
Conversion time	Six months per pond, corresponding to the normal lifespan of a farmed shrimp.
Broodstock origin	A minimum of half the broodstock shall be domesticated after three years operating. The remainder is to be pathogen free wild broodstock originating from sustainable fisheries. A compulsory screening to be implemented on the first and second generation prior to introducing to the farm.
Eyestalk ablation	Is prohibited.

Maximum on farm stocking	Seeding: maximum 22 post larvae/m 2
densities and production limits	Maximum instantaneous biomass: 240 g/m 2

# **SECTION 7a**

Organic production of crayfish;

Species concerned: Astacus astacus, Pacifastacus leniusculus

Maximum stocking density	For small-sized crayfish (<20mm): 100 individuals per m2. For crayfish of	
	intermediate size (20-50mm): 30 individuals per m2. For adult crayfish (>50	
	mm): 10 individuals per m2, provided that adequate hiding places are	
	available.	

# **SECTION 8**

### Molluscs and echinoderms:

Production systems	Long-lines, rafts, bottom culture, net bags, cages, trays, lantern nets, bouchot poles and other containment systems. For mussel cultivation on rafts the number of drop-ropes shall not exceed one per square meter of surface area. The maximum drop-rope length shall not exceed 20 metres. Thinning-out of drop-ropes shall not take place during the production cycle, however subdivision of drop ropes shall be permitted without increasing stocking density at the outset.
--------------------	---

### **SECTION 9**

 $Tropical\ fresh\ water\ fish:\ milk fish\ (Chanos\ chanos),\ tilapia\ (Oreochromis\ spp.),\ siamese\ cat fish\ (Pangasius\ spp.):$ 

Production systems	Ponds and net cages	
Maximum stocking density	Pangasius: 10 kg/m 3	Oreochromis: 20 kg/m 3

# **SECTION 10**

Other aquaculture animal species: none

ends
